The Candle Twins

and the Golden Bell

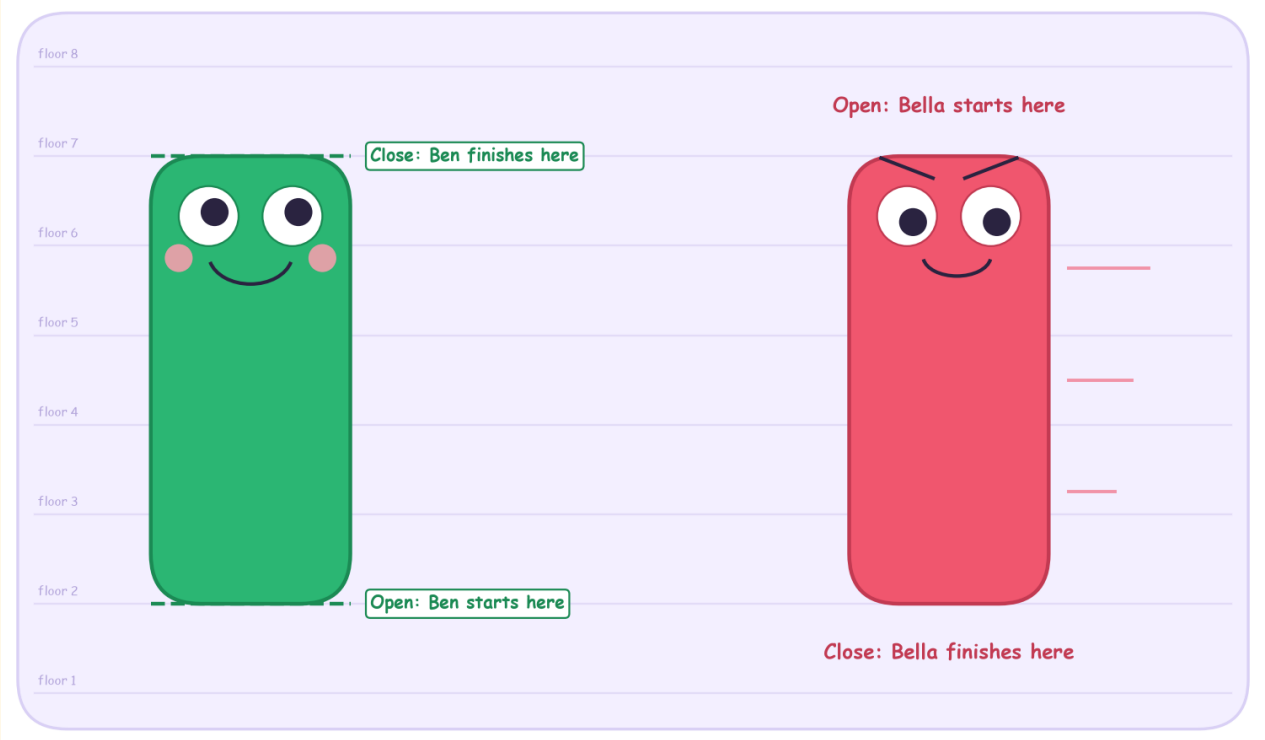

A Candle Town story about how
MummyTKT's Bias Pointer finds its trades

For curious readers aged 7 to 10 (and their grown-ups)

CHAPTER 1

Meet the Candle Twins

In Candle Town there is a very tall building. Each level is a **floor**. The higher the floor, the higher the price.

Two twins live here. **Bullish Ben** wears a bright **green shirt**. He is happy, and he loves to **climb**.

Ben always starts on a low floor called his **Open**. Then up, up, UP he goes, to a higher floor called his **Close**.

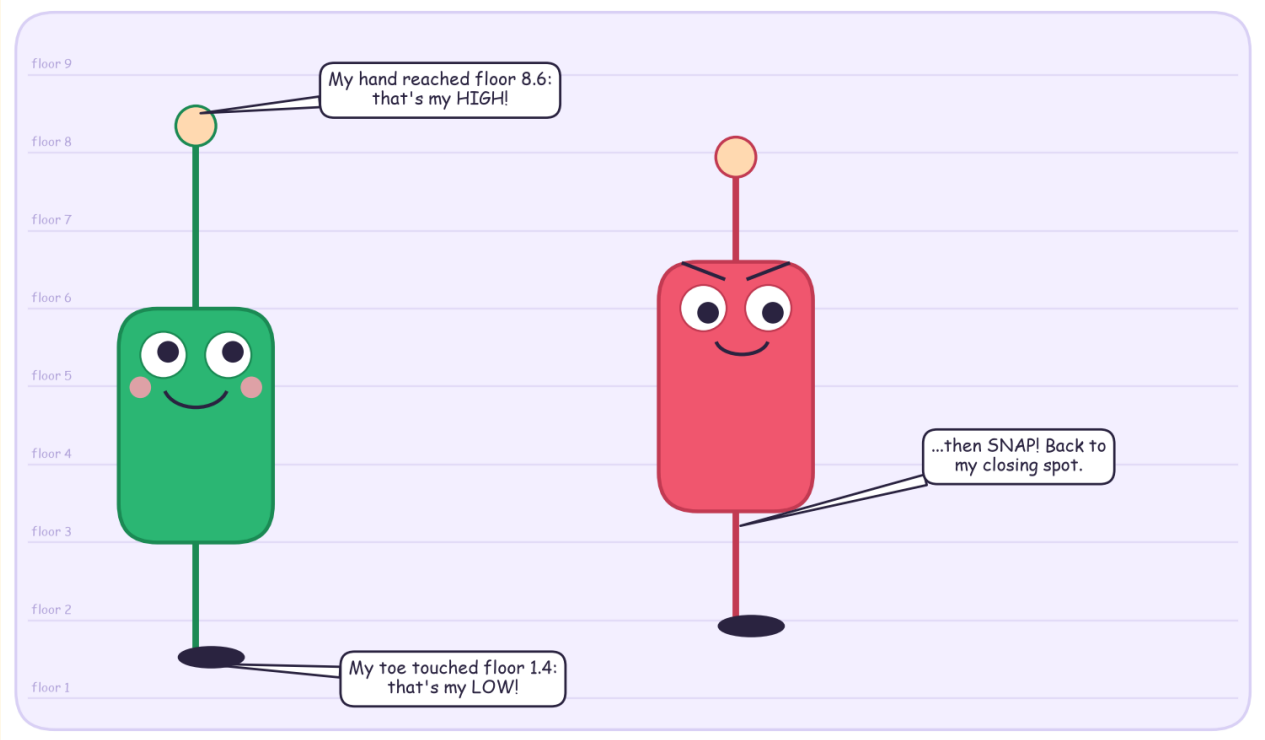

Bearish Bella wears a bright **red shirt**. She is speedy, and she loves to **slide**.

Bella starts on a high floor (her **Open**) and zooms DOWN to a lower floor (her **Close**). Wheee!

Their shirt always stretches from where they started to where they finished. That's the twin's **body**.

CHAPTER 2

Stretchy Arms and Stretchy Legs

The twins have a secret. Their arms and legs are **STRETCHY**!

While they move, they reach out to see how far they can go. Ben's arm shoots up, up, up. Bella's leg stretches down, down, down.

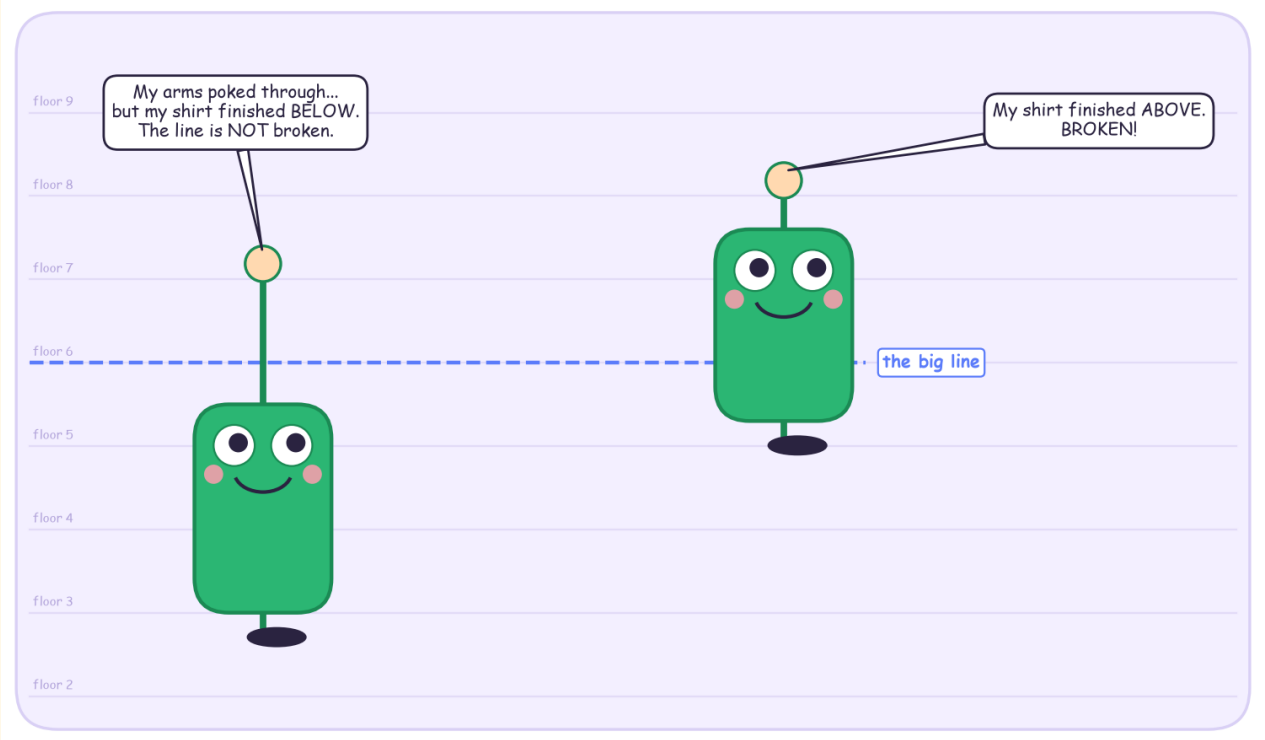

The highest floor a fingertip touches is called the **High**. The lowest floor a toe touches is called the **Low**.

But stretching is only exploring. When time is up, **SNAP!** The arms and legs spring back, and the twin stands at the **Close**.

Grown-ups call the arms and legs **wicks**.

CHAPTER 3

The Closing Bell

Every twin gets a turn. When the turn ends, the **Closing Bell** rings. Ding!

Only the spot where the **shirt finishes** counts. Arms and legs can wave and wiggle all they like. They never decide anything.

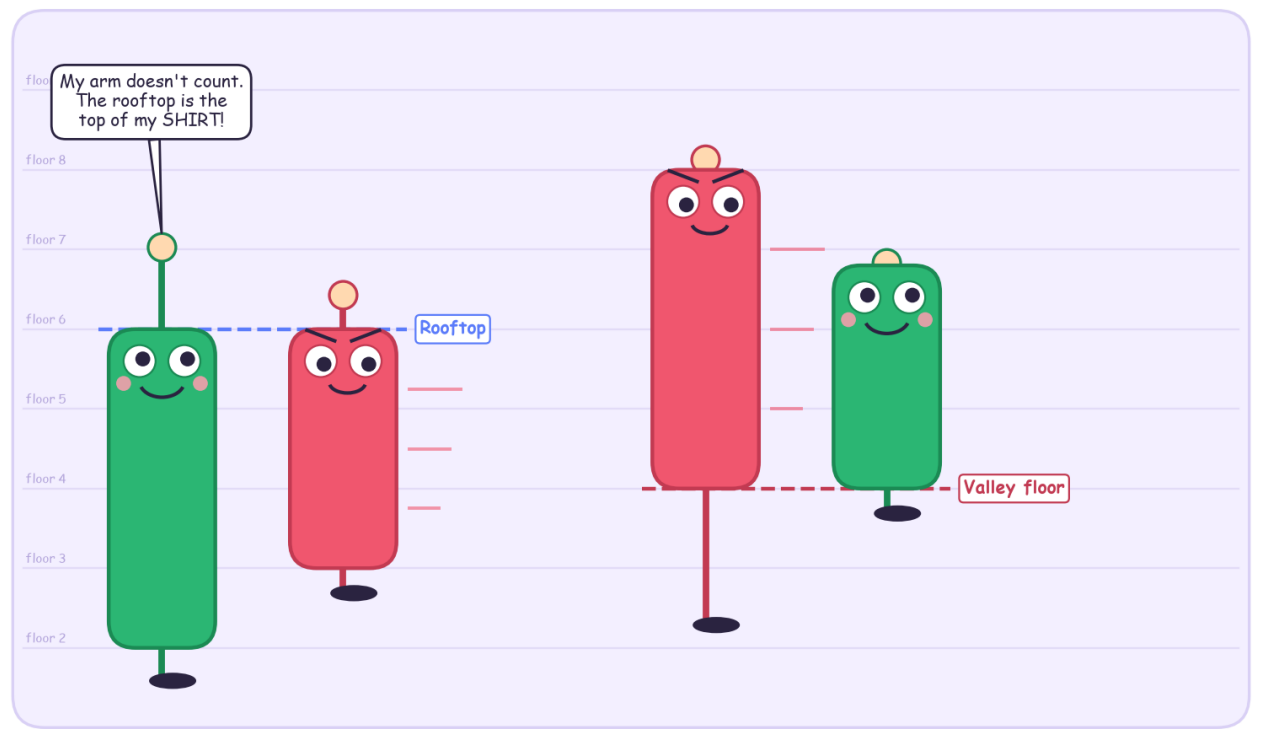

Look! A line is painted on the wall. The first Ben stretched his arm right through it... but his shirt finished **below** it. Not broken!

The second Ben finished with his whole shirt **above** the line. Now it's **broken**.

Golden rule: lines are only broken by shirts, and only when the bell rings.

CHAPTER 4

Rooftops and Valleys

When Ben climbs and Bella slides **right after him**, they make a pointy **rooftop**, like the letter A.

The rooftop line sits at the **top of Ben's shirt**. That's where Ben closed. His stretchy arm doesn't count!

Grown-ups call it an **A-shape**, and it acts like a ceiling. Prices bump into it from below.

When Bella slides and Ben climbs **right after her**, they make a **valley**, like the letter V.

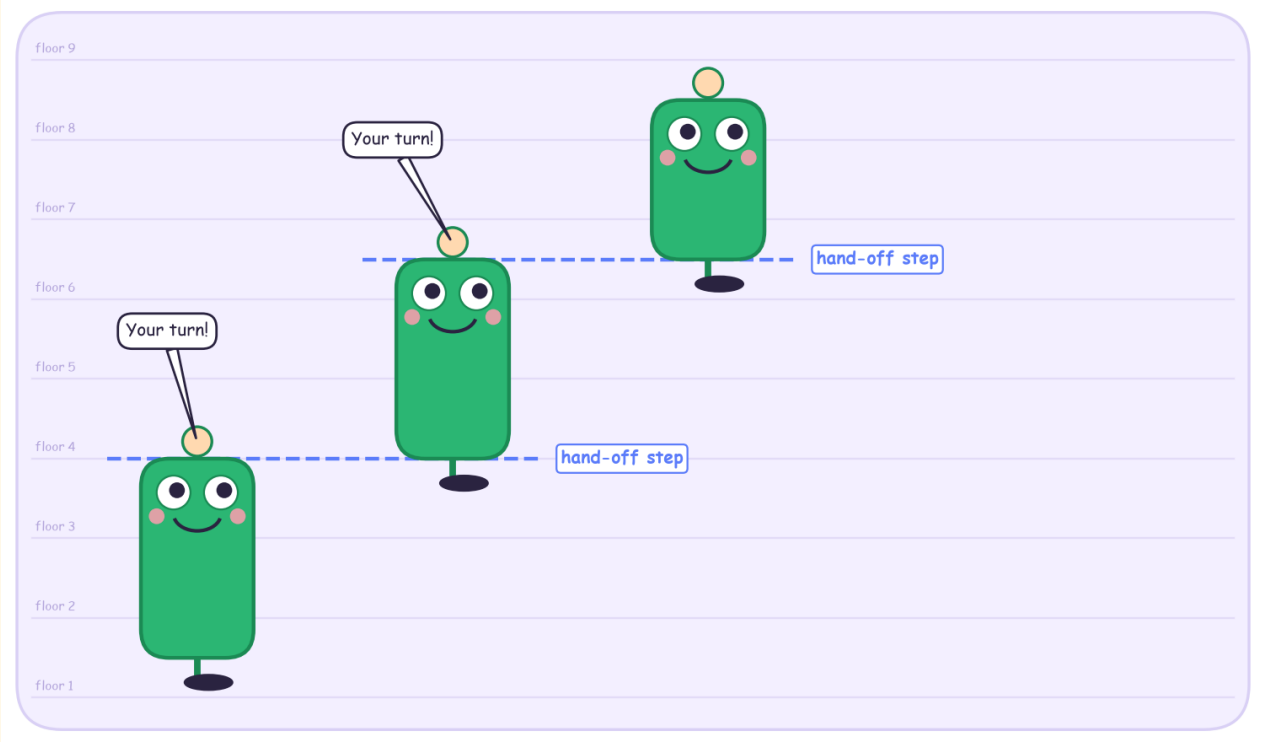

The valley floor sits at the **bottom of Bella's shirt**, where she closed. That's a **V-shape**, and it acts like a floor.

Little Twins always use the **newest** rooftop and the **newest** valley.

Giant Twins (you'll meet them soon) measure their rooftop from the **highest fingertip** of the pair, and their valley from the **lowest toe**.

CHAPTER 5

The Hand-off Step

Sometimes two Bens climb **one after the other**, like a relay race.

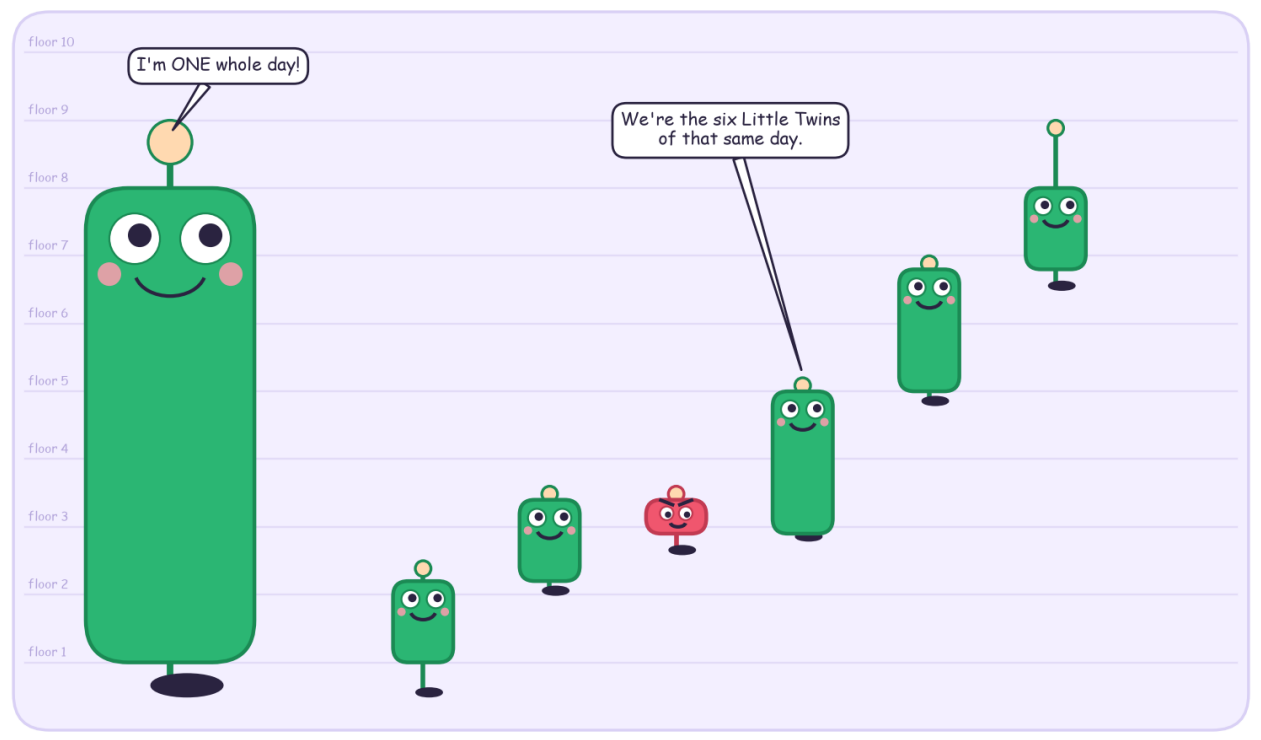

The first Ben finishes his climb and shouts, "Your turn!" The second Ben starts right there.

That spot, where the first twin **closed** and the next one **opened**, is a **Hand-off Step**. Grown-ups call it an **OC** (Open-Close).

Three Bens in a row make **two** hand-off steps. Two Bellas sliding in a row make one too, going down.

CHAPTER 6

Giants and Little Twins

The twins come in sizes! **Giant Twins** each take a whole day. Grown-ups call them the **Daily** candles.

Little Twins take four hours each. Grown-ups call them the **H4** candles.

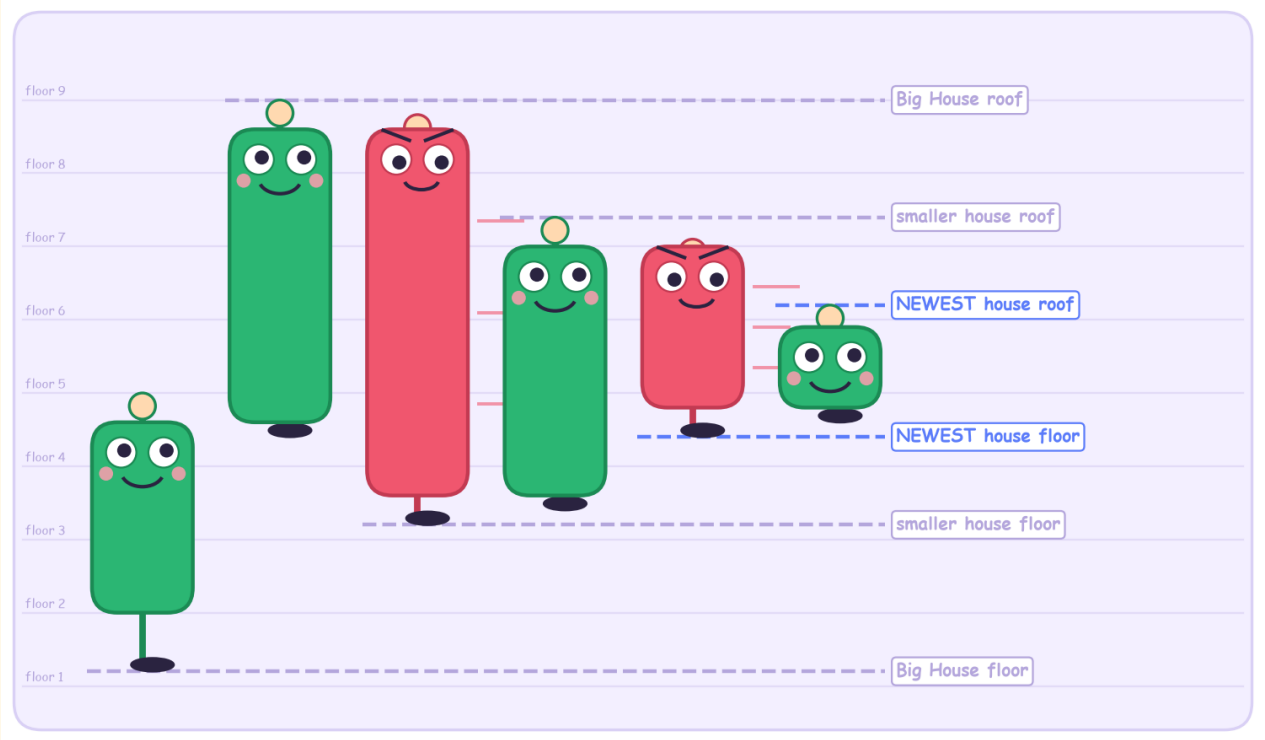

Six Little Twins fit inside one Giant day. Look: the first Little Twin opens where the Giant opens. The last one closes where the Giant closes.

The highest Little fingertip is the Giant's High. The lowest Little toe is the Giant's Low. Same day, same moves, just different sizes.

Giants decide the direction. Little Twins find the moment.

CHAPTER 7

Houses Inside Houses

The Giant Twins live in a **Big House**. Its floor is the lowest spot a Giant's toe reached before Ben broke out through a rooftop. Grown-ups call it the **external low**.

While the Giants keep climbing, the roof keeps rising with them. It's **still being built**. When a Giant slides back down past the last valley, the roof is finished. That's the **external high**.

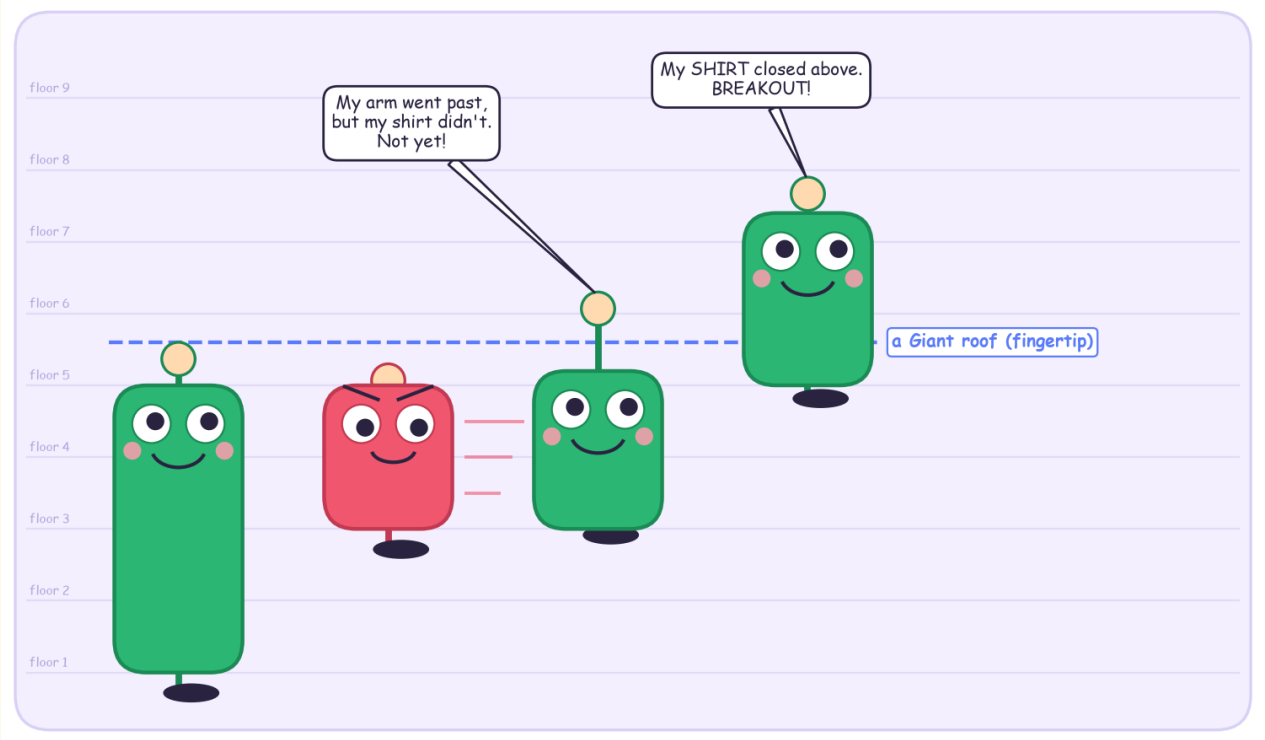

Inside the Big House, a **smaller house** can be built in exactly the same way. And inside that one, an even smaller one, as small as you like!

Candle Town only paints the **newest** house on the wall. Its roof and floor are called the **External high and low**.

When a house breaks, every house inside it disappears, and the house around it is the one that counts again.

CHAPTER 8

The Great Breakout

A Giant Ben climbs and pokes his arm past a roof. At the Closing Bell his shirt finishes... still below it. **Not yet!**

The next Giant Ben climbs higher. At the Closing Bell his **shirt is above the roof**.

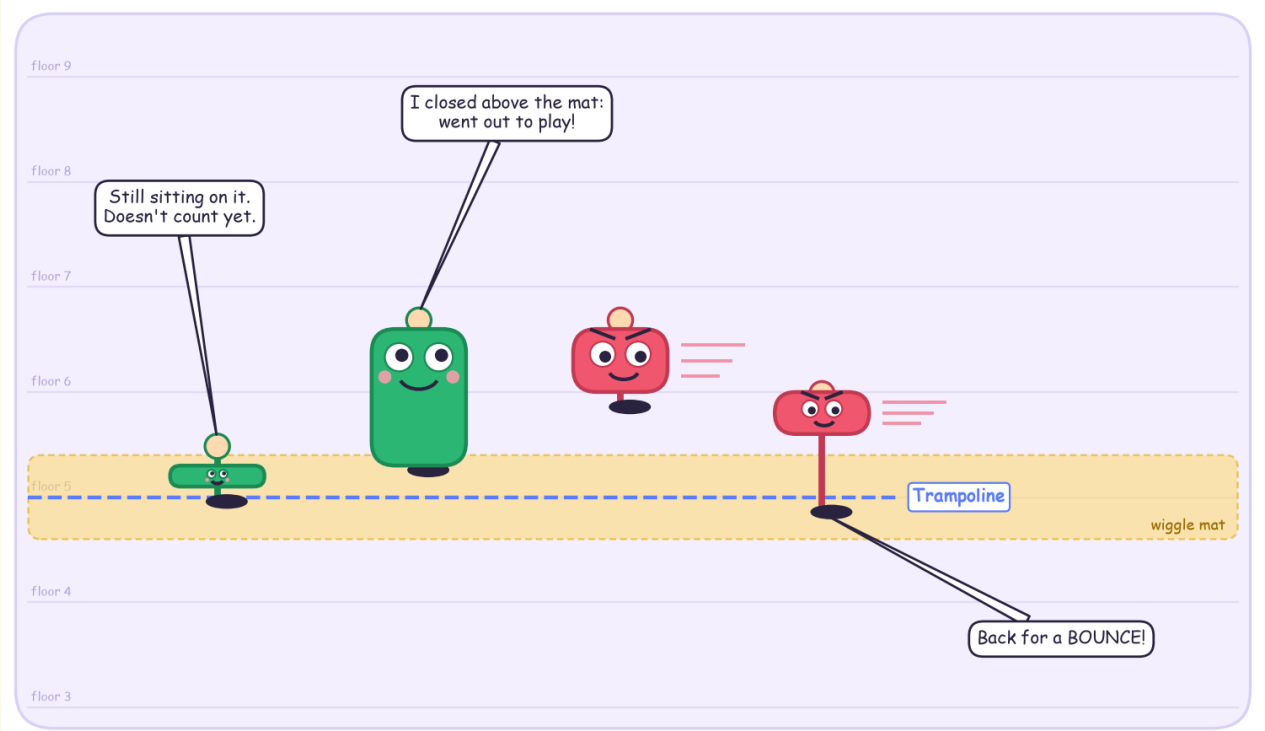

BREAKOUT! Now Candle Town knows the direction: **UP**.

It is always the roof or floor of the **newest house**. The newest breakout is the one that matters.

A breakout is not a trade yet. It's the **start** of the adventure.

CHAPTER 9

The Old Ceiling Becomes a Trampoline

Here's some magic. The roof that got broken flips into a **Trampoline**! The old ceiling is now a floor to bounce on. Grown-ups call it the **Daily Breaker**.

The trampoline has a cushion around it called the **Wiggle Mat**. It's 5 **pips** thick on each side. (Pips are the tiniest steps a price can take.)

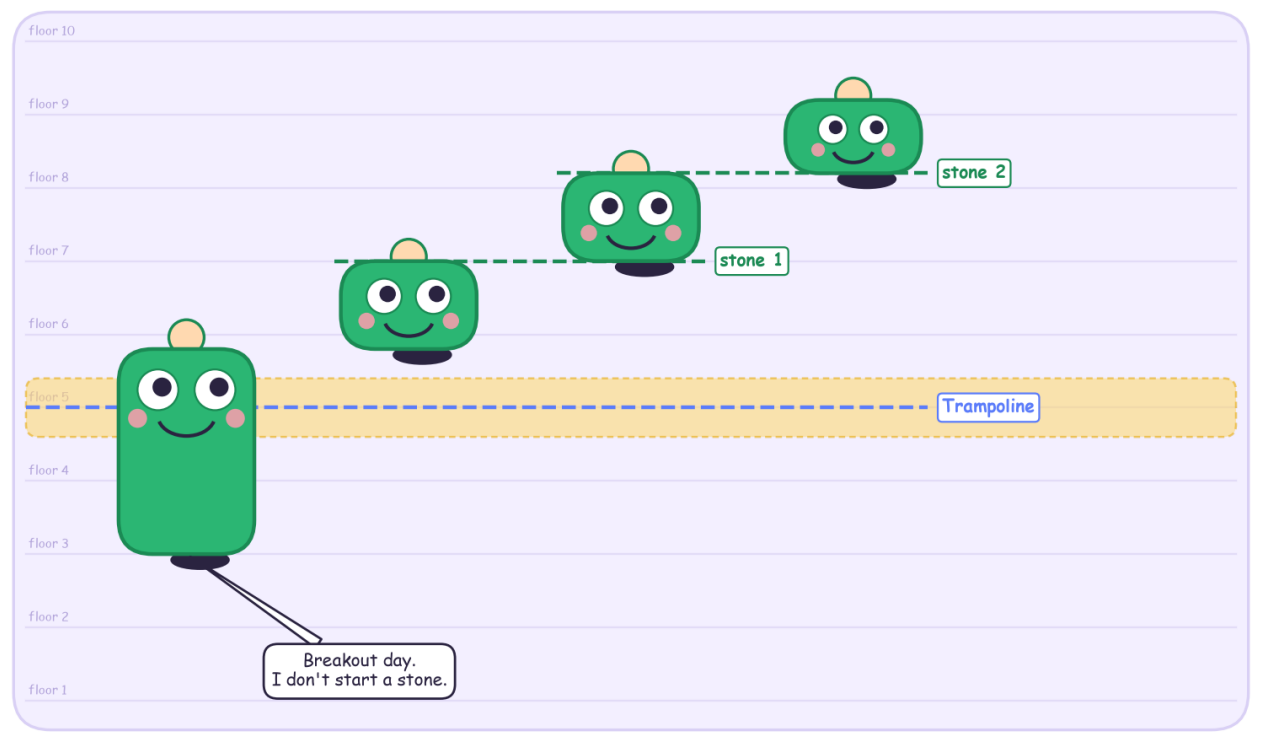

But first, the Little Twins must **go out to play**. A Little Twin has to close **above the Trampoline's Wiggle Mat**.

A twin still sitting on the trampoline hasn't left, so it doesn't count.

Only after they've gone out to play can a twin come back for a **bounce**. That's when it's a real **visit**.

CHAPTER 10

Stepping Stones

After the breakout day, more Giant Bens may keep climbing. Each pair that climbs one after the other makes a **Stepping Stone**. That's a Giant hand-off step.

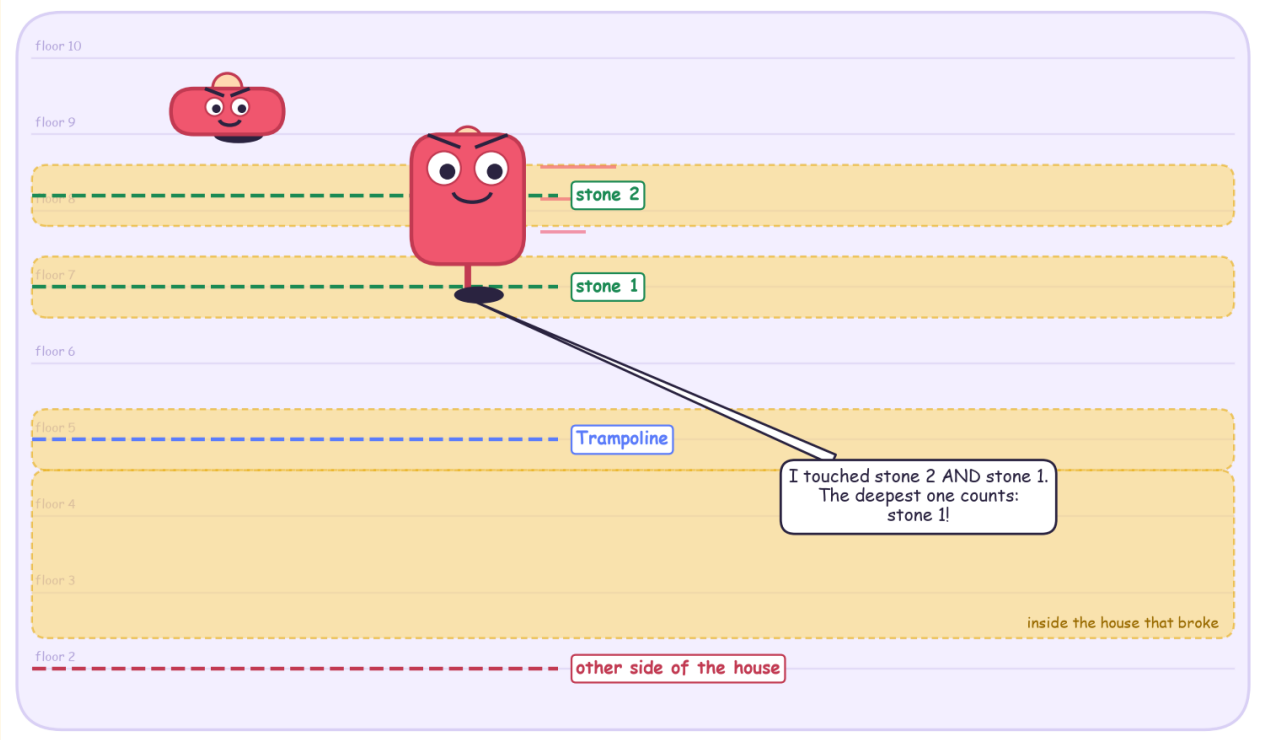

Both Giants in the pair must close **above the breakout line**. The stone must also sit **clear of the Trampoline's mat**.

The breakout day itself doesn't get to start a stone.

Candle Town keeps **every** stepping stone it finds, and watches them all, until the next Giant breakout.

CHAPTER 11

The Safe Spots

Now the Little Twins go looking for a safe place to land. Bella slides down... and stretches her leg to touch a Wiggle Mat.

If her toe (or shirt) touches a safe spot's mat, and her shirt **doesn't close through it**, she has made a **visit**. Grown-ups call it a **reaction**.

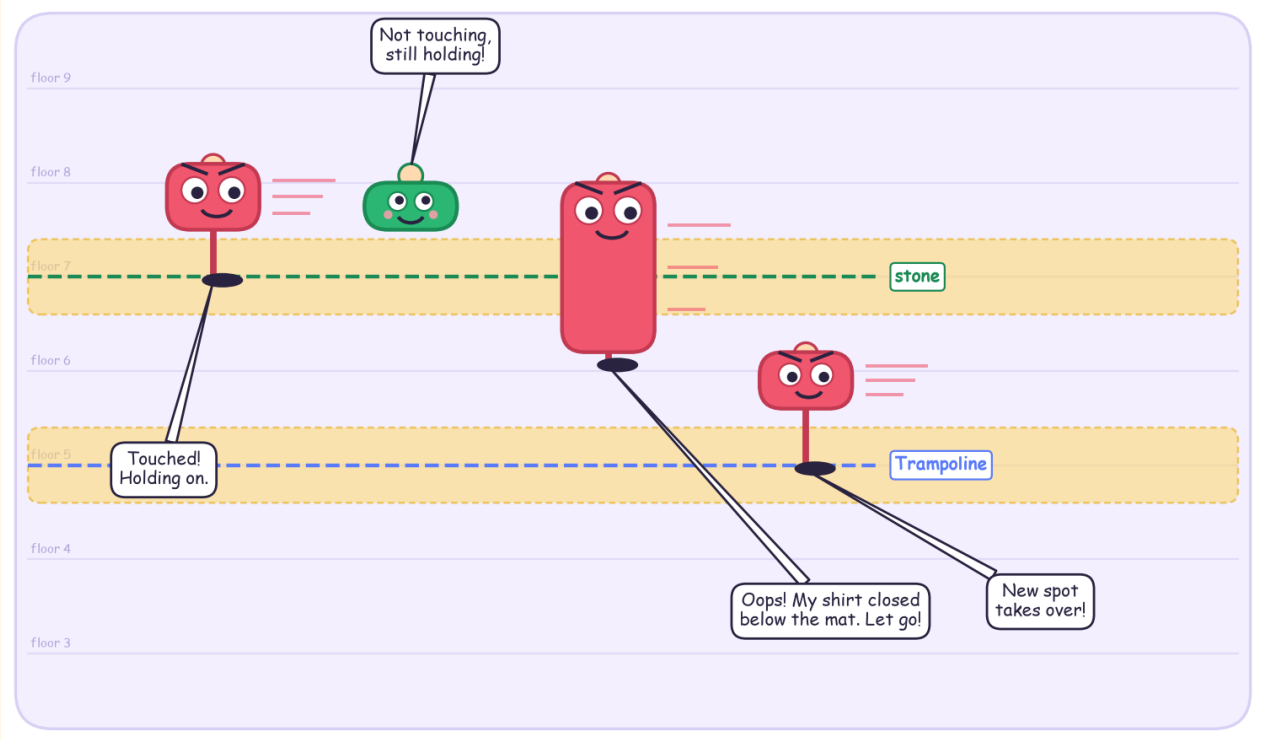

There are three kinds of safe spots. Candle Town checks them in this order:

1. The **deepest stepping stone** the twin touched. **2.** The **Trampoline**. **3.** **Inside the house that just broke**: her shirt closes below the trampoline's mat but still above the other side of that house.

It doesn't matter which spot the twins reach first. Any of them can be the safe spot.

CHAPTER 12

Hold On Tight!

Once a twin has made a visit, the visit **stays alive**. Later twins don't have to touch the spot again.

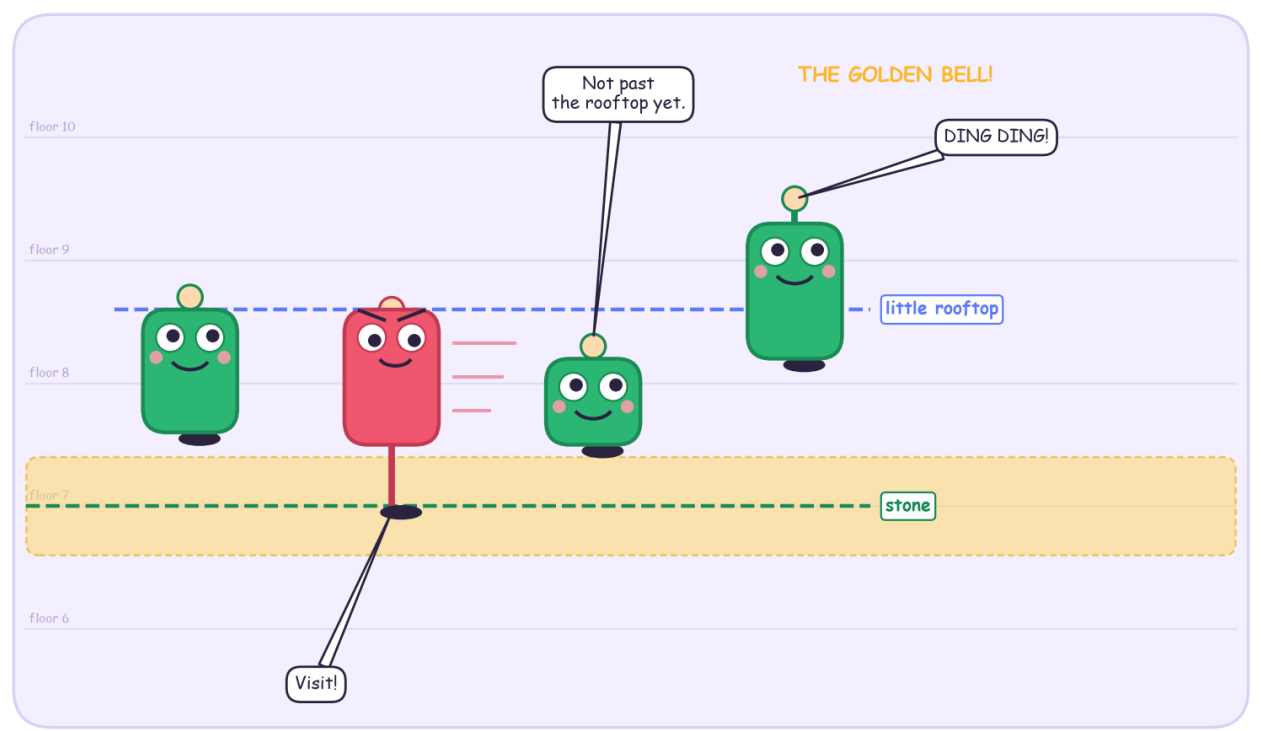

The visit only ends if a twin's shirt **closes back through the spot**, below its mat. Then everyone lets go.

But don't worry! If the twins land on the **next** safe spot, the adventure carries on from there.

Not touching is fine. **Closing through** is what lets go.

CHAPTER 13

The Golden Bell

While a visit is alive, the Little Twins build little rooftops (little A-shapes) of their own.

Then it happens. A Little Twin closes his shirt **above the newest little rooftop**. (It's almost always Ben!)

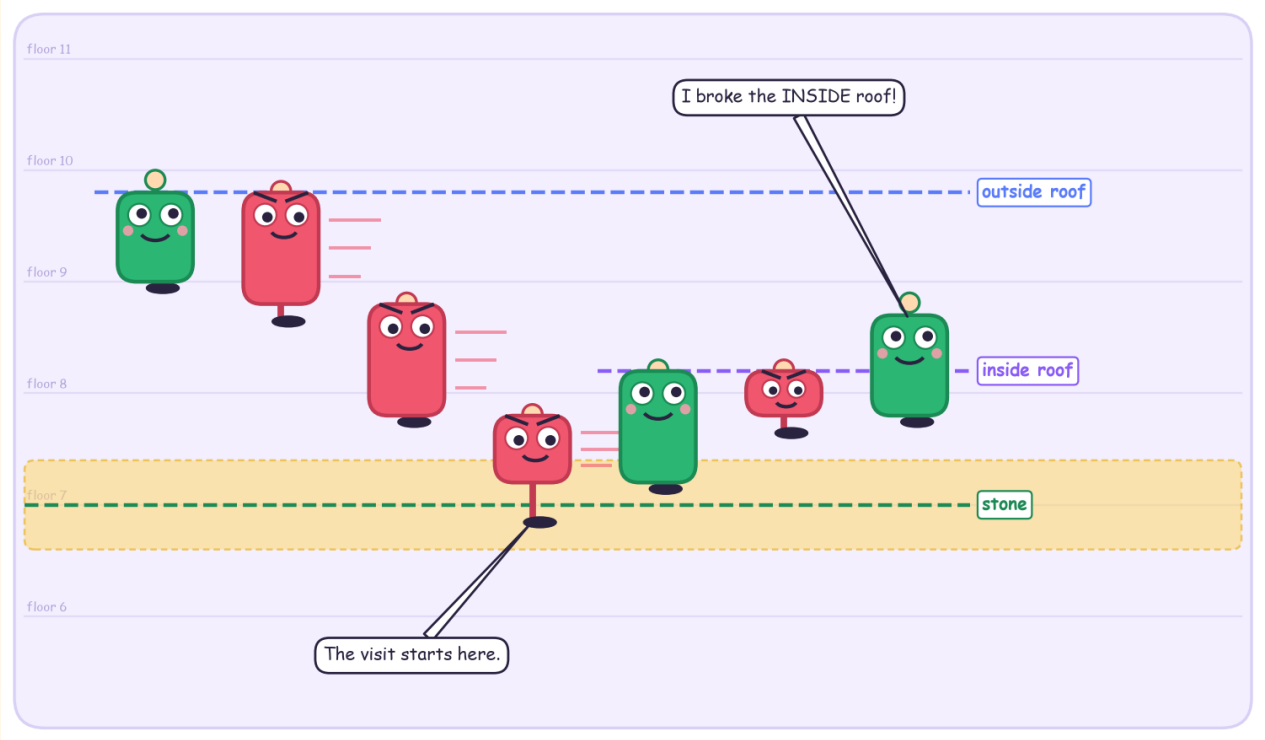

DING DING DING! That's the **Golden Bell**. Grown-ups call it the **Origin**, and it's the main alert!

It doesn't have to be the twin who visited. Any **later** Little Twin can ring it. The twin who just finished building a rooftop can't break it at the same moment.

The Golden Bell rings **only once** for each Giant breakout.

CHAPTER 14

Outside Roof or Inside Roof?

The Golden Bell always uses the **newest** little rooftop. But where was it built?

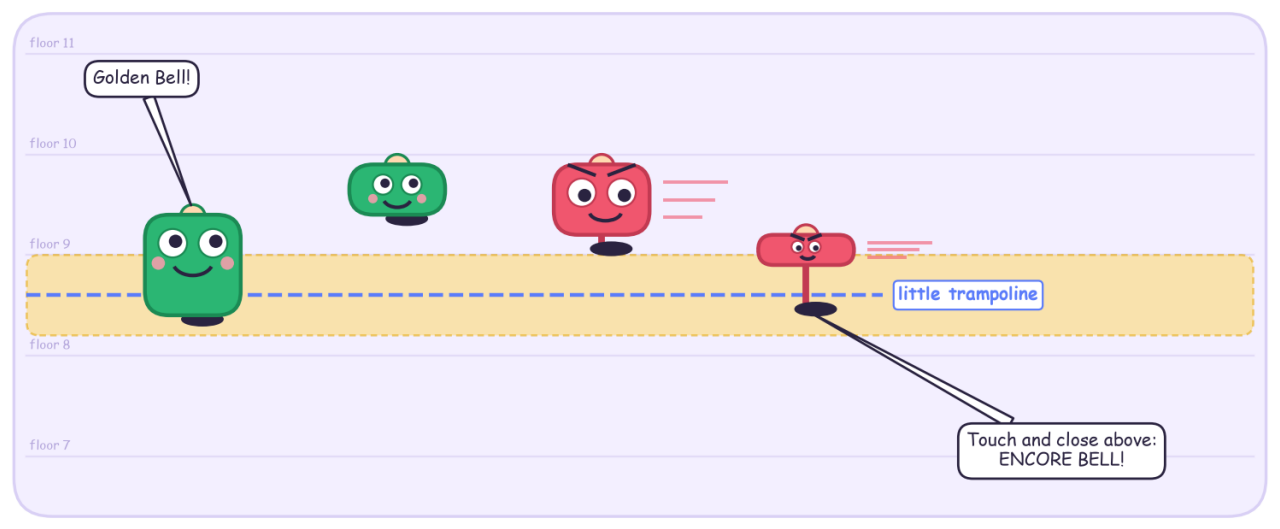

If it was built **before** the visit started, it's an **Outside roof**. Grown-ups say **External**.

If it was built **during** the visit, it's an **Inside roof**. Grown-ups say **Internal**.

Each grown-up can choose which bells they want on their phone: outside, inside, or both.

CHAPTER 15

Encore Bells!

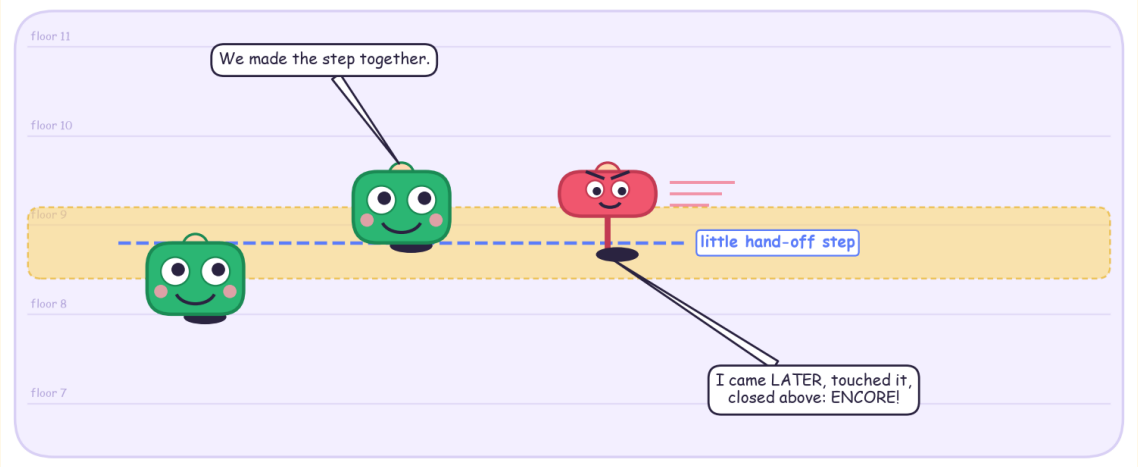

After the Golden Bell, the Little Twins keep climbing. Every new good bounce rings an **Encore Bell**. Grown-ups call these **continuations**.

The little trampoline. The little rooftop that the Golden Bell broke becomes a little trampoline. If a later twin touches it (within its mat) and closes **above** it, ENCORE!

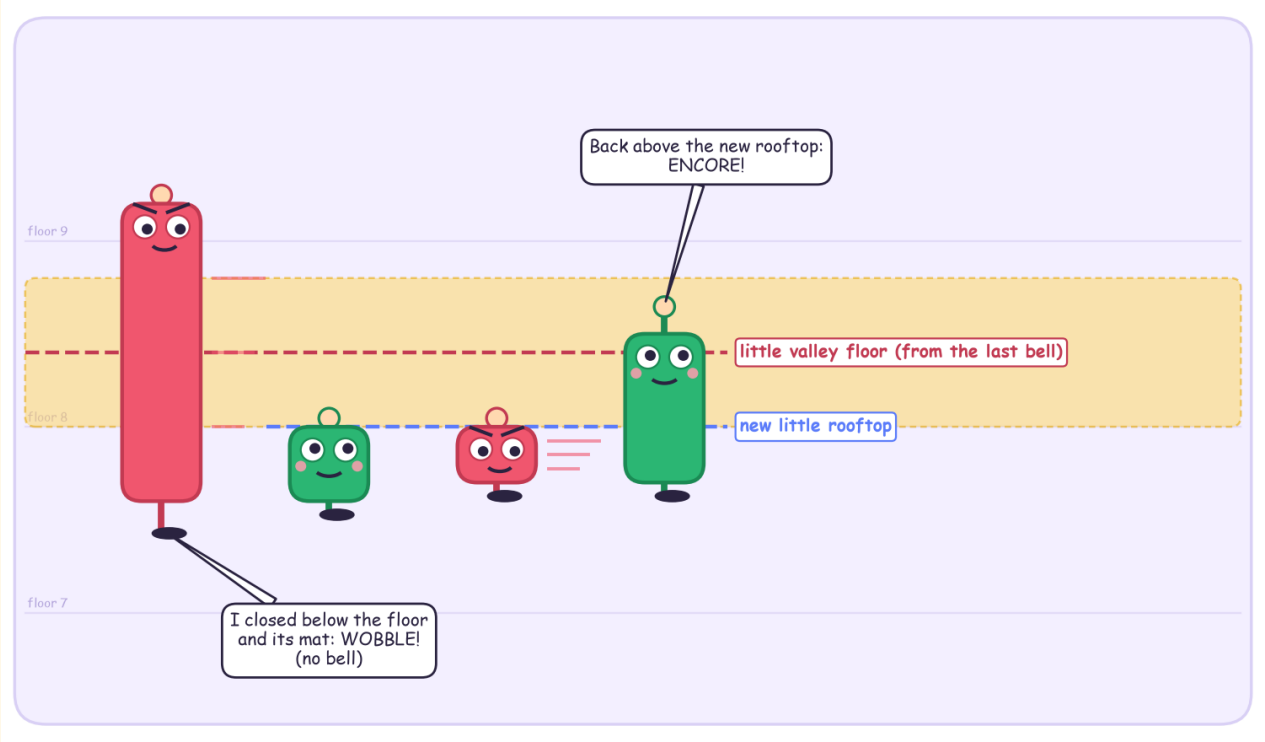

The little hand-off step. When two Little Bens climb one after the other, they make a little step. If a **later** twin touches it and closes above, ENCORE!

Each visit to a spot rings **once**. The twins must leave and come back to ring it again.

CHAPTER 16

The Wobble

Sometimes the Little Twins slip. A twin closes **below the little valley floor and its mat**, the one that was there at the last bell.

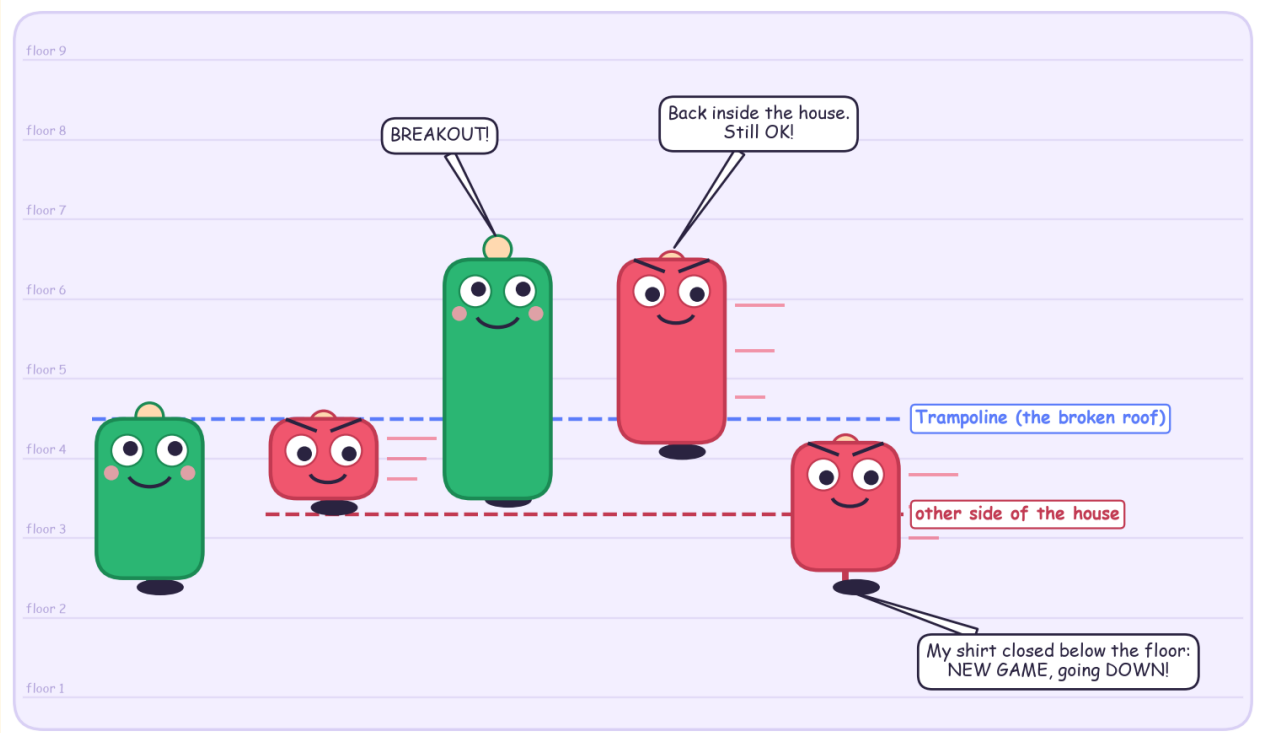

That's a **Wobble**. They're out of line. No bell rings for a wobble.

But if a later twin climbs back and closes **above the newest little rooftop**, ENCORE! The climb is back on.

Encore Bells keep ringing like this until the next Giant breakout.

CHAPTER 17

A Brand-New Game

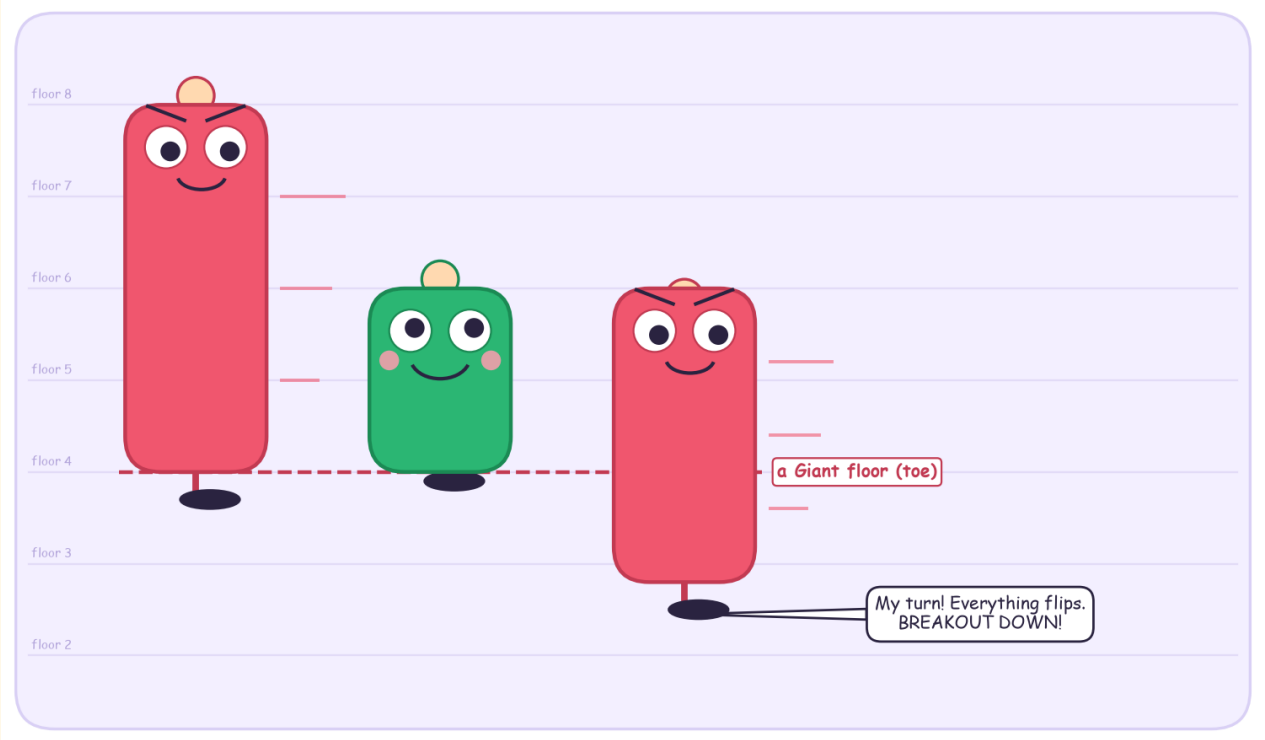

Giants can slide back **inside the house that just broke**, below the trampoline. That's okay! That's where visits happen.

But if a Giant's shirt closes past the **other side** of that house (the newest house's floor), that's a **breakout the other way**.

The old game ends and a **brand-new game** begins, going DOWN. Any new Giant breakout starts a new game.

CHAPTER 18

Bella's Turn: The Mirror World

Everything you learned works for Bella too. Just flip it upside down, like a mirror!

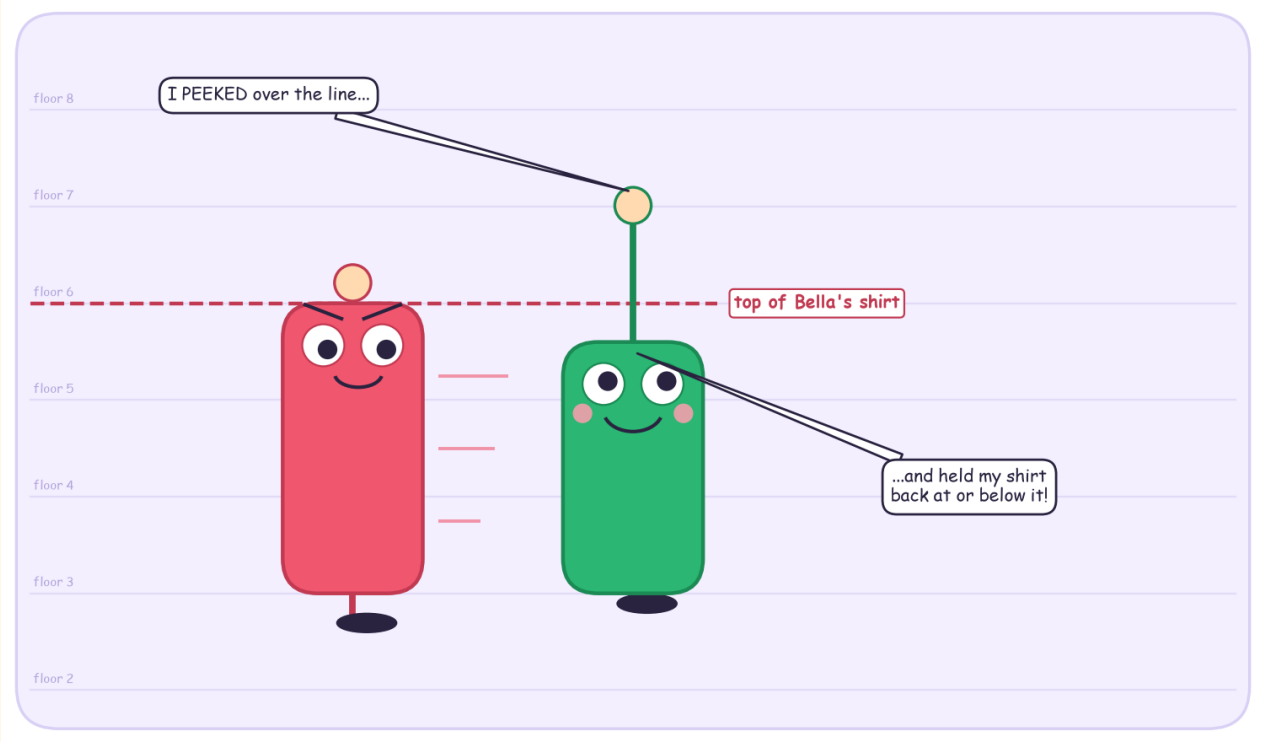

A Giant Bella's shirt closes **below the newest house's floor**. BREAKOUT DOWN!

The broken floor becomes a **ceiling**. Stepping stones are made by two Giant Bellas sliding one after the other.

The Golden Bell rings when a Little Twin closes **below the newest little valley floor**. A Giant closing **above a roof** starts a new game going up.

CHAPTER 19

The Tiny Twins' Secret Signals: Peek-and-Hold

Now meet the **Tiny Twins**. They take just one or two hours each (grown-ups say **H1** and **H2**). They help grown-ups pick the exact moment to step in.

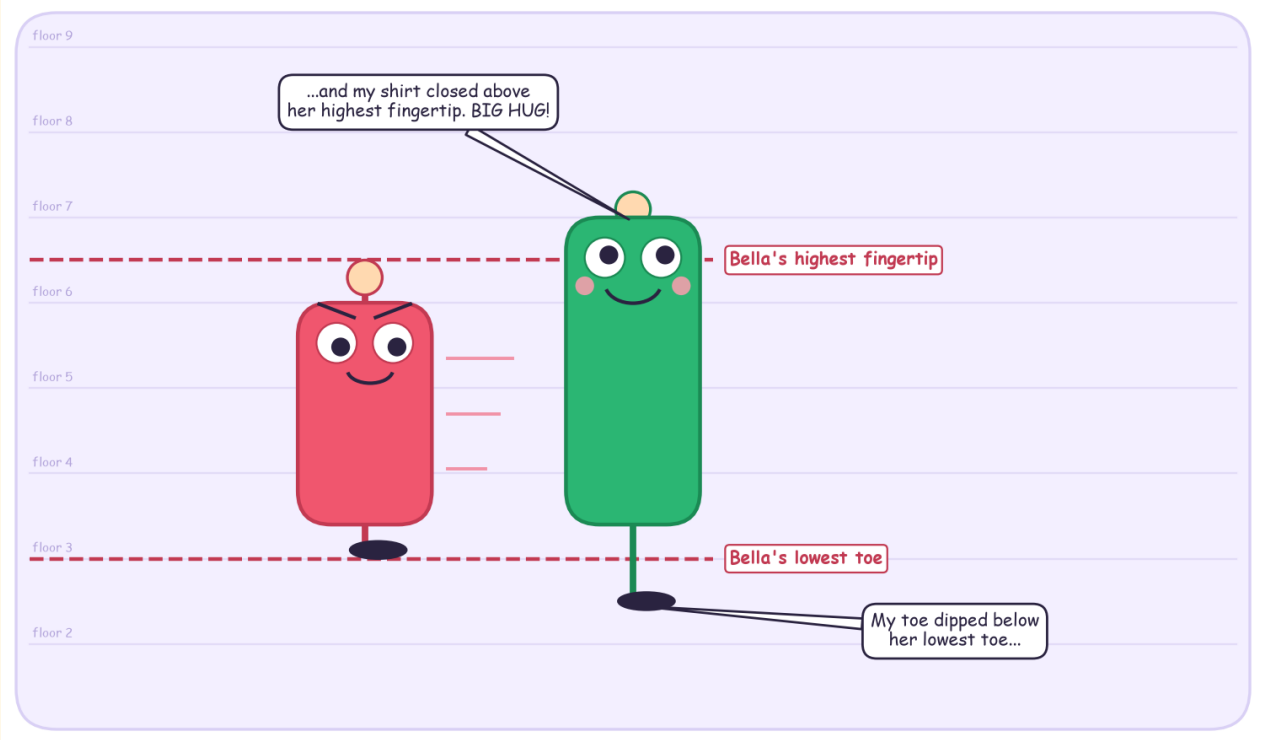

Peek-and-Hold (grown-ups call it a **PCL**): Bella slides first. Then Ben climbs.

Ben's stretchy arm **peeks above the top of Bella's shirt**... but at the bell, his shirt finishes **at or below** that line. He peeked, and he held.

Mirror version: Ben climbs first. Then Bella's leg peeks **below the bottom of Ben's shirt**, and her shirt finishes at or above it.

CHAPTER 20

The Big Hug

The **Big Hug** (grown-ups call it an **Engulfing Sweep**) is a super-move!

Bella slides first. Then Ben's leg stretches **below Bella's lowest toe**, sweeping underneath her.

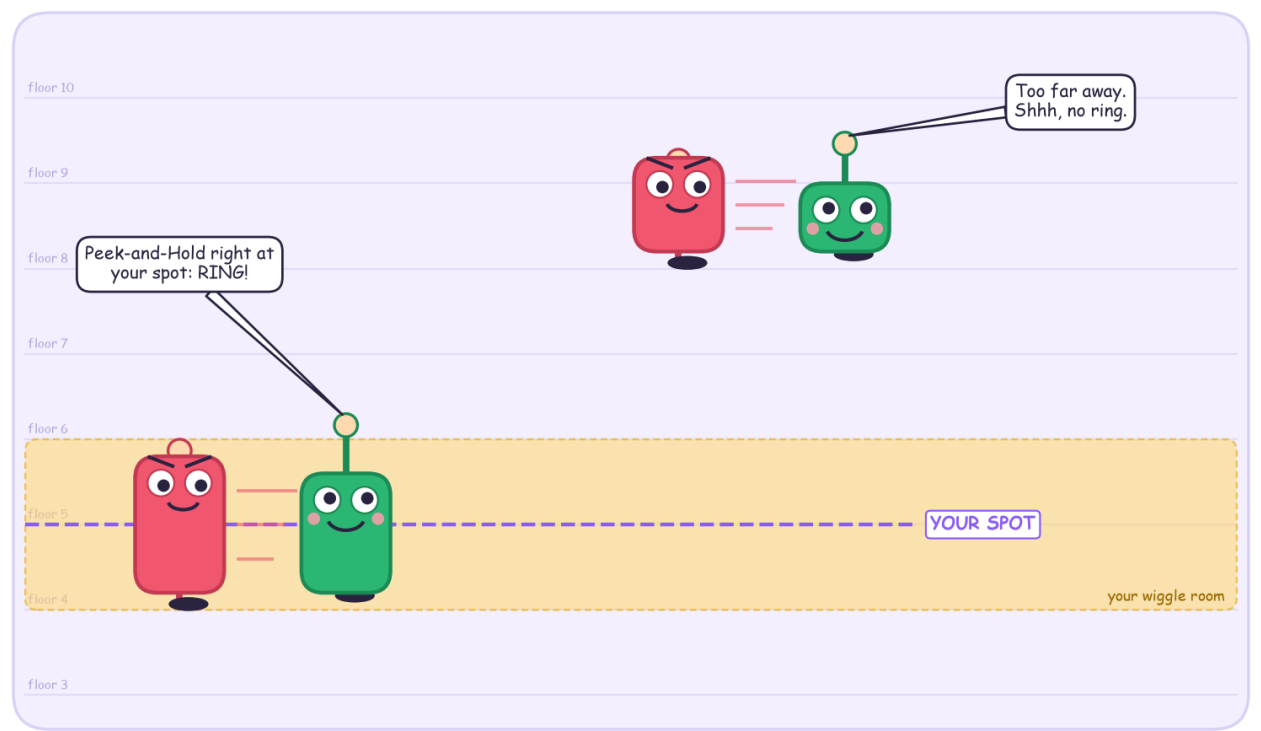

Then Ben climbs so high that his shirt closes **above Bella's highest fingertip**. He has wrapped her up in a big hug!

This time it's the **arms and legs** (the High and Low) that Ben has to beat, not just her shirt.

Mirror version: Ben climbs first. Bella's arm reaches above his highest fingertip, then her shirt closes below his lowest toe.

CHAPTER 21

Only at Your Spot

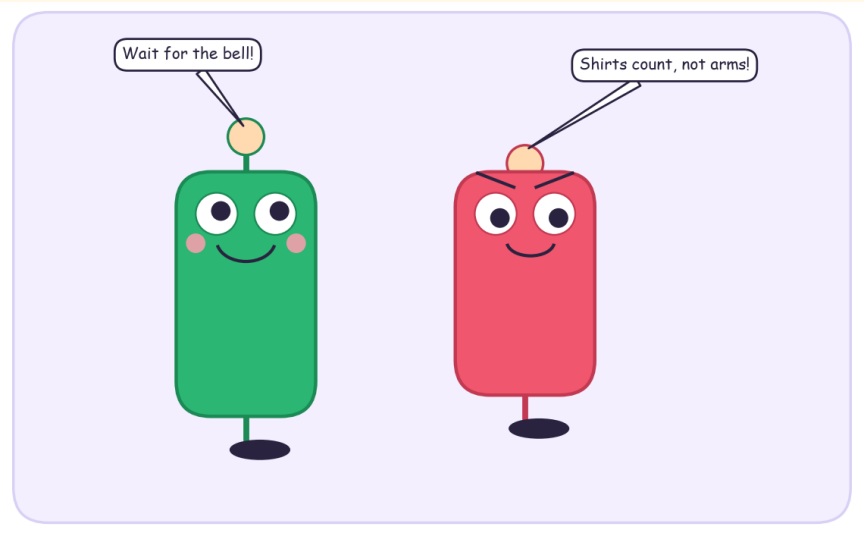

Tiny signals happen all over the building. Most of them aren't for you.

So a grown-up picks **their own spot** and a direction (up or down). Candle Town only rings the Tiny bell when a signal closes **inside their wiggle room**. That's 20 pips each way, unless they choose different.

Once it rings, that spot's bell is done.

Signals far away from your spot? Shhh. No ring.

The Moral of the Story

A trade is READY when the story goes in this order:

1. A **Giant** twin's shirt closes past the roof or floor of the newest house. Breakout!

2. A **Little** twin visits a **safe spot** (a stepping stone, the trampoline, or inside the house that just broke) and doesn't close through it.

3. A Little twin's shirt closes past the **newest little rooftop**. The **Golden Bell** rings!

4. At **your spot**, a Tiny twin shows a **Peek-and-Hold** or a **Big Hug**.

The game changes when a Giant's shirt closes past the other side of the house. Then a brand-new game starts the other way.

And always remember: arms and legs can wiggle all they like. Only **shirts** count, and only when the **bell** rings.

Ready doesn't mean sure. Even when every bell rings, the twins can still surprise us. That's why grown-ups always plan what to do if they're wrong.

For Grown-Ups

Every picture in this book is drawn from real open, high, low and close values. The rules match the **MummyTKT Strategy Rulebook** exactly. Here is the story word for each real term:

Bullish Ben (green shirt)	a bullish candle: close above open
Bearish Bella (red shirt)	a bearish candle: close below open
Shirt	candle body (open to close)
Stretchy arms and legs	upper and lower wicks (to the high and low)
Closing Bell	candle close; nothing is judged before it
Rooftop / Valley floor	A-shape / V-shape level (Giants: wicks; Little twins: bodies)
Newest house (roof / floor)	the most recent External high / low (Daily)
Hand-off Step	OC level (close of candle 1 = open of candle 2)
Giant / Little / Tiny Twins	Daily / H4 / H1 and H2 candles
Wiggle Mat	tolerance band on the H4 zones (5 pips; entry alerts 20 pips)
Great Breakout	Daily close beyond the most recent External high/low
Trampoline	Daily Breaker (the broken level)
Stepping Stones	post-breakout Daily OCs (all watched)
Visit	reaction / retest of a Daily zone
Golden Bell	Origin alert (first H4 confirmation)
Outside / Inside roof	External / Internal H4 break
Encore Bell	continuation alert
Wobble	H4 out of alignment
Brand-new game	the next Daily breakout replaces the setup
Peek-and-Hold / Big Hug	PCL / Engulfing Sweep entry patterns
