MummyTKT's Bias Pointer

Strategy Rulebook

Every rule the platform uses to find a directional bias, confirm it and alert you — in plain words, with a picture for each.

Version: 10 November 2026 (script v14: the MTF story, with the numbered pullback map. Daily breakout, H4 continuations, the pullback line, pullback confirmed, the H4 range, reaction zones and the ten story alerts. Entry Confirmations v4: PCL, OCTGD, CISD, Sweep and Break, Engulfing)
This rulebook is the source of truth. When a rule changes, this document and the TradingView scripts change together.

How to read each rule

Each rule has a plain-words description, the exact condition for a **Buy** (bullish) and a **Sell** (bearish) setup side by side, a picture, and notes. Pictures show the buy side; the sell side is the mirror image. Green candles are up, red are down, dashed lines are levels, and blue bands are zones.

Contents

A. Candle basics
- Rule 1 — Bullish and bearish candles
- Rule 2 — Closes, not wicks

B. Formations (Daily and H4)
- Rule 3 — A-shape — resistance
- Rule 4 — V-shape — support
- Rule 5 — OC — Open/Close level

C. The story
- Rule 6 — The whole story at a glance
- Rule 7 — Daily external high and low, and the Daily breakout
- Rule 8 — A real pullback
- Rule 9 — H4 continuations and the pullback line
- Rule 10 — Pullback confirmed
- Rule 11 — H4 continuation after the pullback
- Rule 12 — H4 pullback: back in alignment, the H4 range
- Rule 13 — Inside the H4 range
- Rule 14 — H4 range high broken: the Daily continues
- Rule 15 — H4 range low broken: H4 against the Daily again

D. Reaction zones
- Rule 16 — FVG, OC and V-shape in the move
- Rule 17 — Merged zones

E. Entry patterns
- Rule 18 — PCL — H1 (the same as the H1 Sweep)
- Rule 19 — OCTGD — H1: the Open-Close that got disrespected
- Rule 20 — Sweep and Break — M15 / M5
- Rule 21 — CISD — H1 / M15 / M5: Change in State of Delivery
- Rule 22 — Engulfing — H1 / H2
- Rule 23 — When an entry alert fires

F. Timing and delivery
- Rule 24 — When alerts arrive
- Rule 25 — Who receives an alert

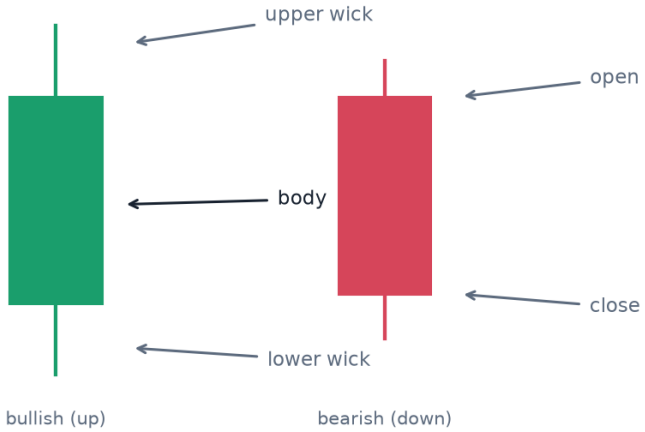

Glossary

A. CANDLE BASICS

Rule 1 — Bullish and bearish candles

A candle is **bullish** (up) when it closes at or above its open, and **bearish** (down) when it closes below its open. The **body** runs between open and close; the **wicks** are the high and low beyond the body.

Buy (bullish)	Sell (bearish)
Close ≥ open	Close < open

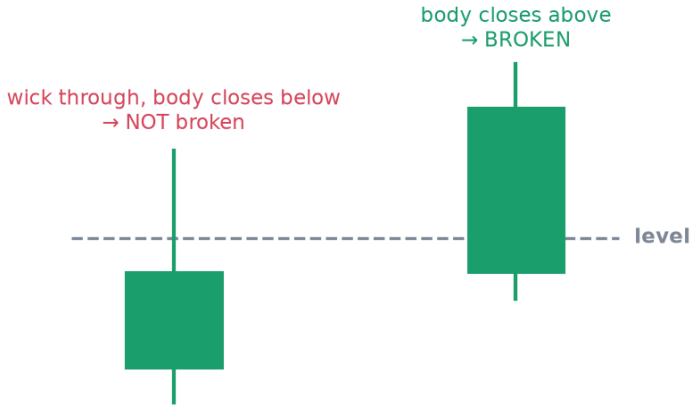

H4 levels and Daily levels (the External high and low, D.A, D.V and inside-range V/A-shapes) use candle **bodies**. The indicator setting **Daily levels from: Wick** switches the Daily levels back to wicks. Entry patterns are described in section H.

Rule 2 — Closes, not wicks

A level is only broken when a candle **body closes** beyond it. A wick that pokes through and closes back never counts as a break.

Buy (bullish)	Sell (bearish)
Broken when a candle closes above the level	Broken when a candle closes below the level

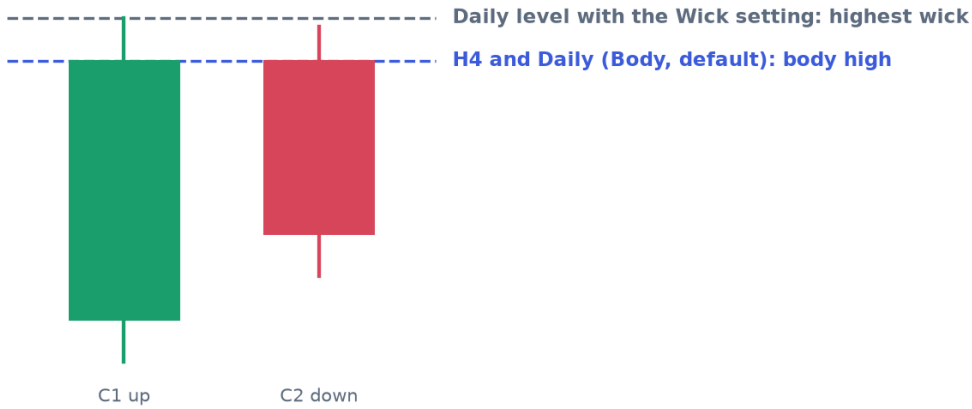

Confirmations are judged on **closed** candles only. A candle still forming can react, but it can't confirm.

B. FORMATIONS (DAILY AND H4)

Rule 3 — A-shape — resistance

An up candle followed immediately by a down candle. On **H4** the level is the **body high of the up candle**. On the **Daily** it is the **highest body top** of the two candles (the highest wick with the Wick setting).

Buy (bullish)	Sell (bearish)
Broken upward when a candle closes above it	In a sell bias the latest Daily one is shown as D.A

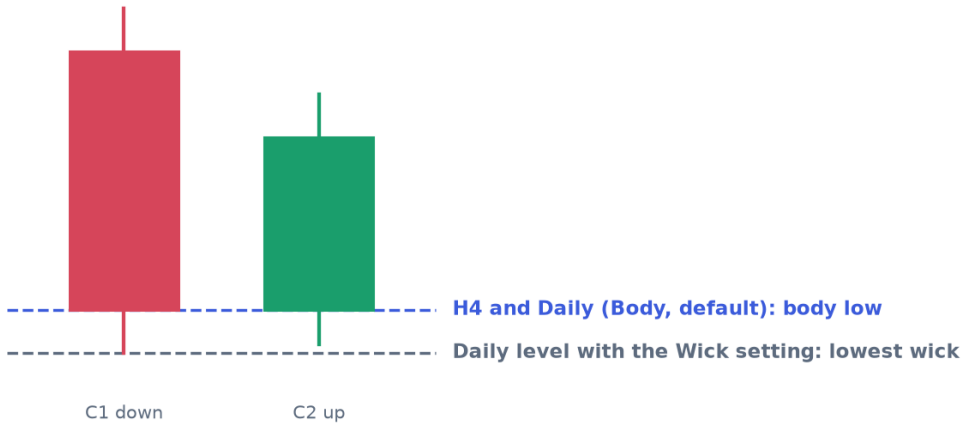

The level exists once the down candle has closed. The most recent A-shape is the one that counts.

Rule 4 — V-shape — support

A down candle followed immediately by an up candle. On **H4** the level is the **body low of the down candle**. On the **Daily** it is the **lowest body bottom** of the two candles (the lowest wick with the Wick setting).

Buy (bullish)	Sell (bearish)
In a buy bias the latest Daily one is shown as D.V	Broken downward when a candle closes below it

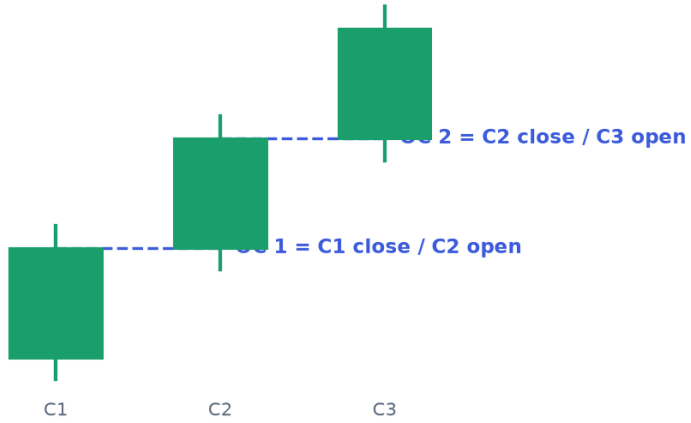

The level exists once the up candle has closed. The most recent V-shape is the one that counts.

Rule 5 — OC — Open/Close level

Two candles in a row in the same direction. The OC level is where the **first candle closed and the second opened**.

Buy (bullish)	Sell (bearish)
Two up candles in a row	Two down candles in a row

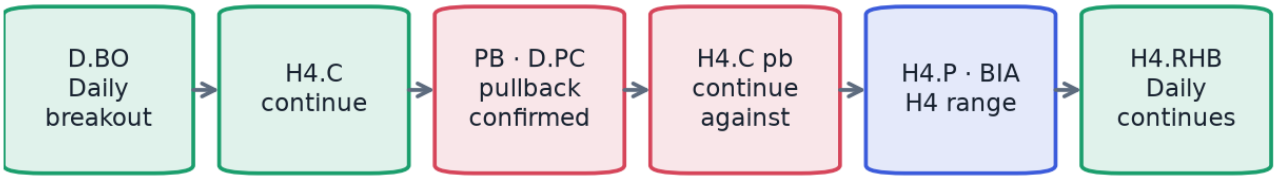

A run of three same-direction candles makes two OC levels (C1/C2 and C2/C3).

C. THE STORY

Rule 6 — The whole story at a glance

The Daily sets the direction and H4 tells the story inside it. Each step below is an alert. The abbreviation is what you see on the chart, and the key table on the chart explains each one.

Buy (bullish)	Sell (bearish)
Bullish Daily breakout, H4 continues up, the pullback is confirmed down, H4 turns back up inside its range	The mirror: bearish Daily breakout, H4 continues down, the pullback is confirmed up, H4 turns back down

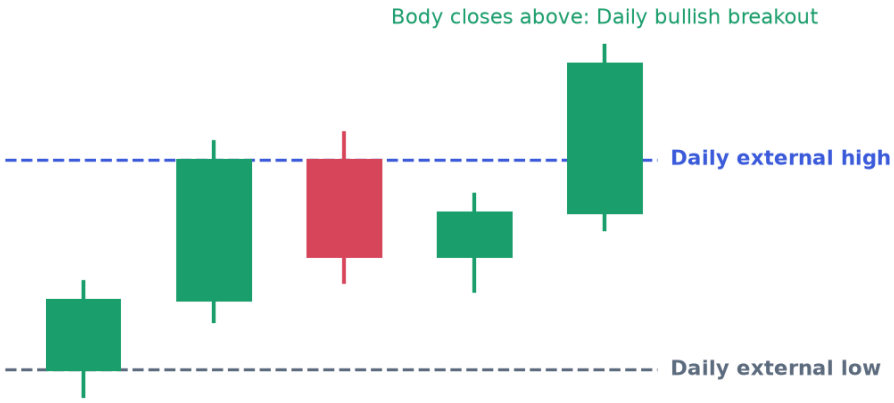

Only one story runs at a time. Every new Daily breakout starts it again in its direction.

Rule 7 — Daily external high and low, and the Daily breakout

A Daily candle **body closes** beyond the Daily external level. The chart labels the levels with the Daily direction: **D.Bull XH / XL** or **D.Bear XH / XL** (f = still forming).

Buy (bullish)	Sell (bearish)
Daily close above the external high	Daily close below the external low

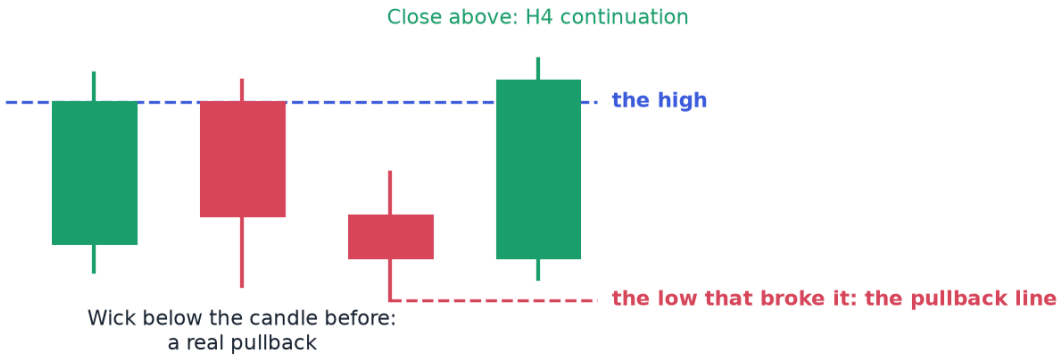

Alert: **Daily breakout**. On the chart: D.BO. A breakout the other way starts a mirrored story.

Rule 8 — A real pullback

A high only counts as broken after a real pullback: a candle's **wick took out the previous candle's low**. Until then a new high is the same leg.

Buy (bullish)	Sell (bearish)
Wick below the previous candle's low	Wick above the previous candle's high

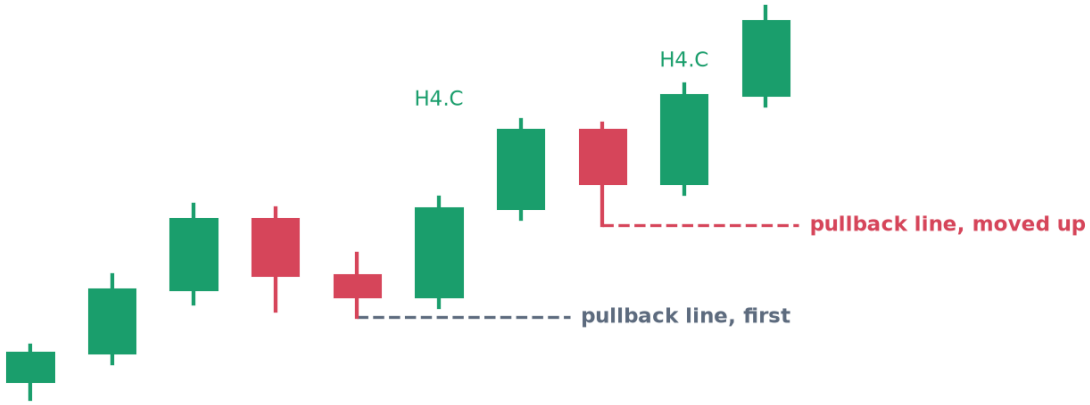

Tiny pauses that don't take out the previous candle's low are ignored. One candle can do both, after a bearish candle: its wick takes out that candle's low and it closes above the high. A straight run of candles the same way has no high or low inside it. It then counts as a continuation and its wick is the new pullback line.

Rule 9 — H4 continuations and the pullback line

Each H4 body close beyond a real high is an **H4 continuation**. The **pullback line (PL)** is the last low inside the breaking move that broke a high; else the new dip low if it is above the current line; else the broken high itself (PL b). It is drawn on the candle's wick; a PL b is drawn on the high itself. A line price has already closed through is finished and is never used again: when the story restarts at a Daily breakout, the next continuation's line is the low the move came from (sells: high).

Buy (bullish)	Sell (bearish)
Close above the last high; the line moves up	Close below the last low; the line moves down

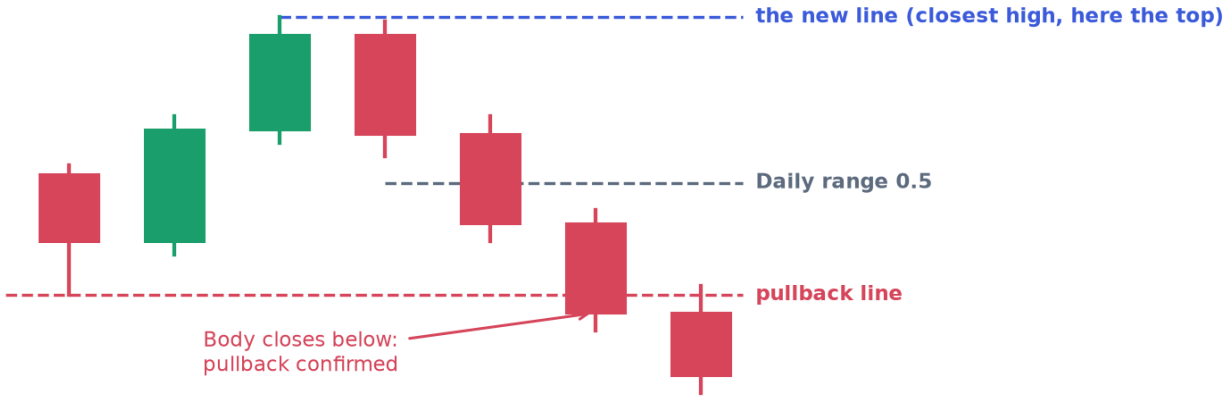

Alert: **H4 continuation after the Daily breakout**. On the chart: H4.C.

Rule 10 — Pullback confirmed

An H4 **body close** beyond the pullback line. H4 is now against the Daily. The Daily range shows with its 0.5 (D.EQ): discount below, premium above. The new line, the H4 key level, is the **closest high inside the range just broken**: walking back from the breaking candle, the last candle whose wick took out the previous candle's high; none means the breaking candle's own wick. The **H4 range** resets to the range just broken: one side is the far end of the broken leg, the other is the newest leg extreme beyond the old line.

Buy (bullish)	Sell (bearish)
H4 close below the pullback line	H4 close above the pullback line

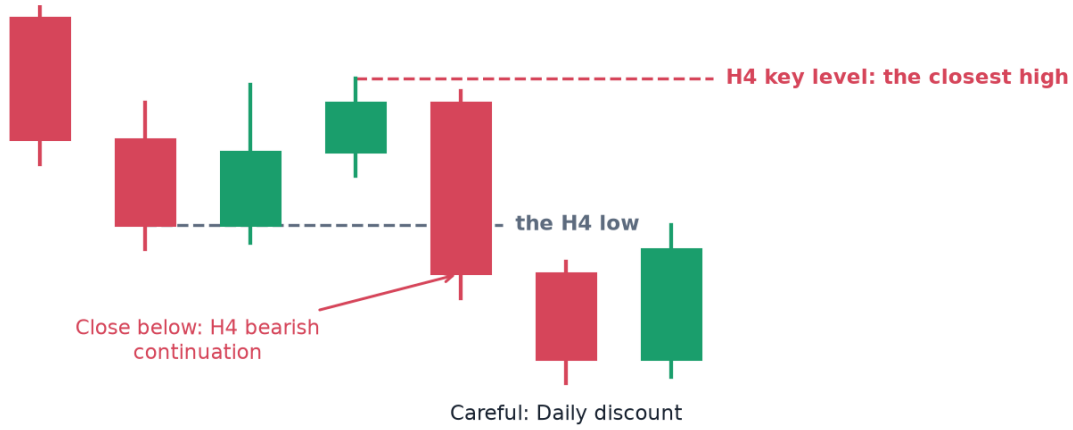

Alert: **H4 pullback confirmed**. On the chart: PB · D.PC.

Rule 11 — H4 continuation after the pullback

Each H4 close beyond the last low of this move, against the Daily, until H4 reverses into the H4 range. The **H4 key level** is the closest high: the line that moves down as each low breaks.

Buy (bullish)	Sell (bearish)
H4 close below the last low	H4 close above the last high

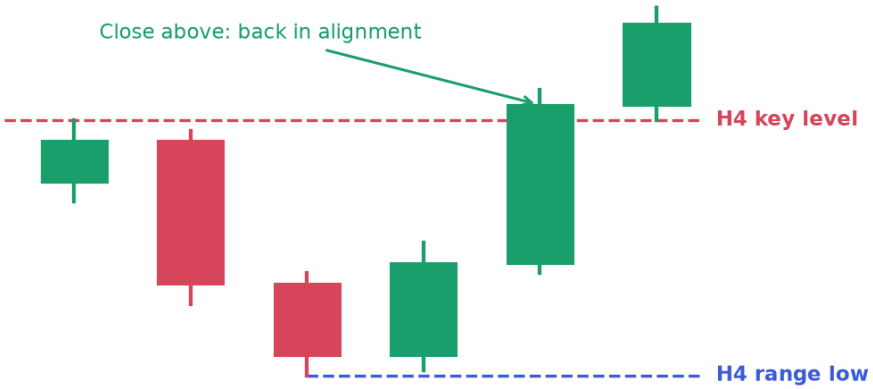

Alert: **H4 continuation after the pullback**. On the chart: H4.C pb. The message warns you when price is in the Daily discount (premium for sells).

Rule 12 — H4 pullback: back in alignment, the H4 range

An H4 close beyond the key level brings H4 back with the Daily. The **H4 range** resets to the range just broken, as it does at every pullback: one side is the far end of the move against the Daily, the other is the newest leg extreme beyond the old line, always inside the Daily range.

Buy (bullish)	Sell (bearish)
H4 close above the key level	H4 close below the key level

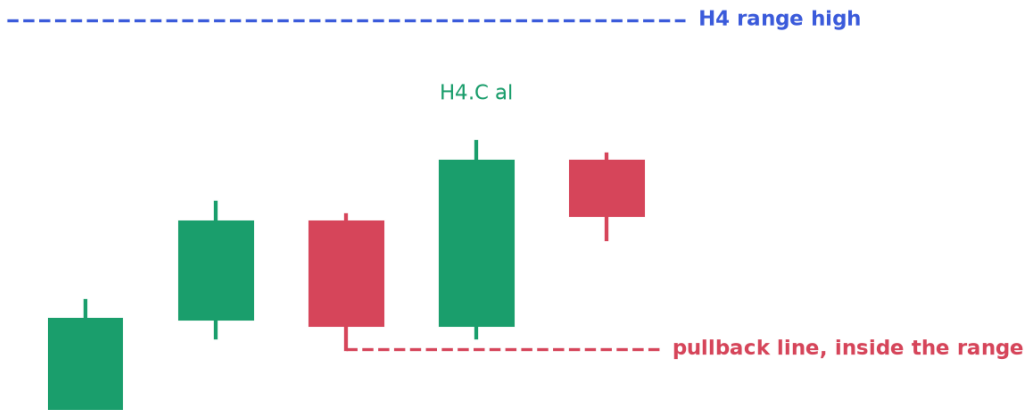

Alert: **H4 pullback: back in alignment**. On the chart: H4.P · BIA, H4.RH, H4.RL.

Rule 13 — Inside the H4 range

The pullback line keeps following the same rule. Each H4 close beyond a real high in the Daily direction is a continuation in alignment. A close beyond the line is a pullback break inside the range, and later breaks against the Daily are continuations inside the range. That pullback break resets the range too. If one candle closes through the line and the range edge, it is one alert: H4 pullback + continuation (H4.P+C).

Buy (bullish)	Sell (bearish)
Close above the last high: in alignment. Close below the line: inside the range	Close below the last low: in alignment. Close above the line: inside the range

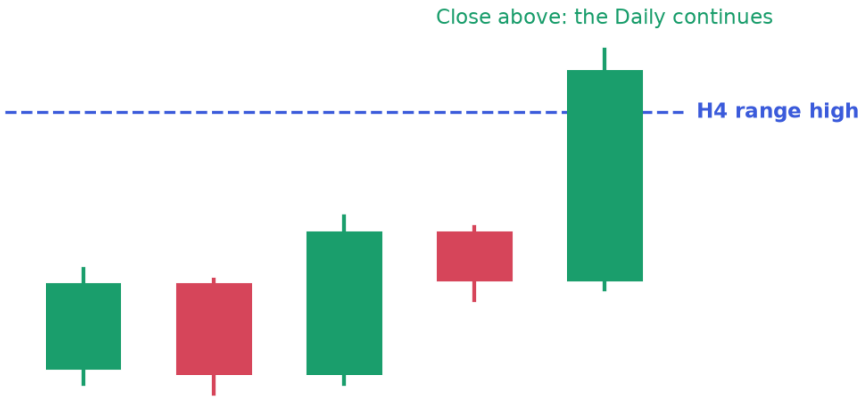

Alerts: **H4 continuation in alignment** (H4.C al), **Inside the H4 range: H4 against the Daily** (PB.in, H4.C in).

Rule 14 — H4 range high broken: the Daily continues

An H4 close beyond the H4 range high. The last H4 high inside the Daily range has gone, so the Daily continues and the story goes back to H4 continuations.

Buy (bullish)	Sell (bearish)
H4 close above the range high	H4 close below the range low

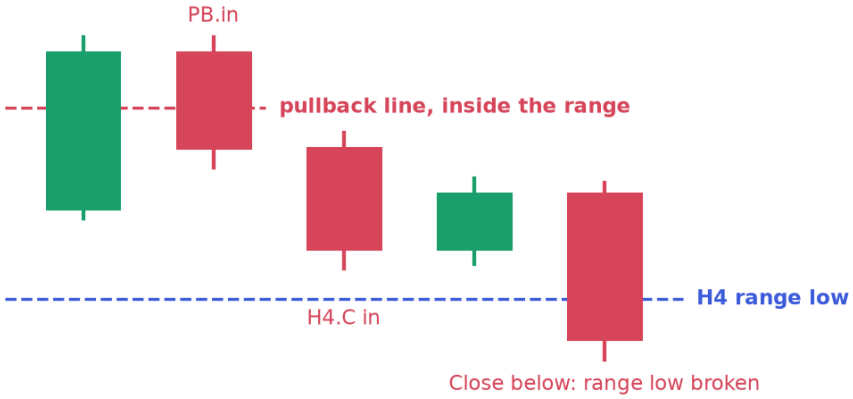

This is a continuation: it comes as **H4 continuation after the Daily breakout**, with that switch (for sells the range's “high” is its lower side). On the chart: H4.RHB · D.C.

Rule 15 — H4 range low broken: H4 against the Daily again

An H4 close beyond the H4 range low. H4 is against the Daily again.

Buy (bullish)	Sell (bearish)
H4 close below the range low	H4 close above the range high

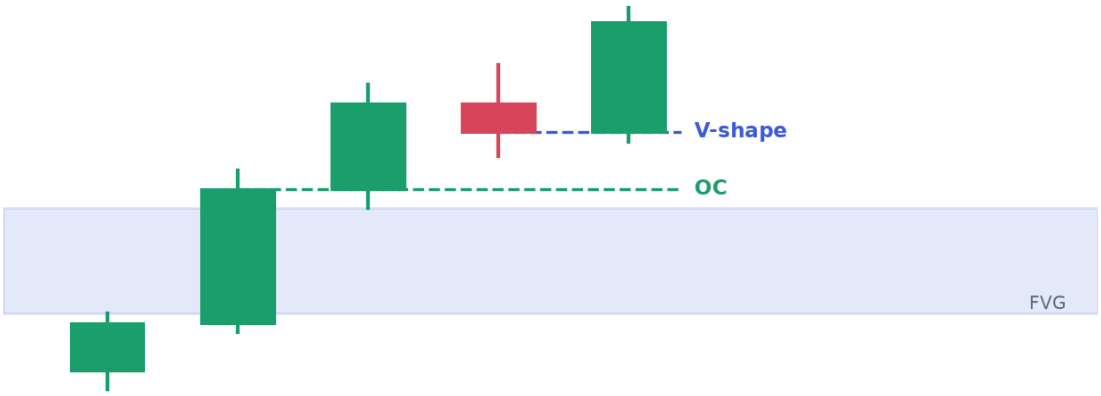

This is a continuation too: it comes as **H4 continuation after the pullback**, with that switch. On the chart: H4.RLB.

D. REACTION ZONES

Rule 16 — FVG, OC and V-shape in the move

The zones of the move price is trading in are drawn for you to watch entries: **FVG** (three-candle gap), **OC** (two candles the same way: where the first closed), **V-shape** (sells: A-shape).

Buy (bullish)	Sell (bearish)
Zones below price, from the bullish move	Zones above price, from the bearish move

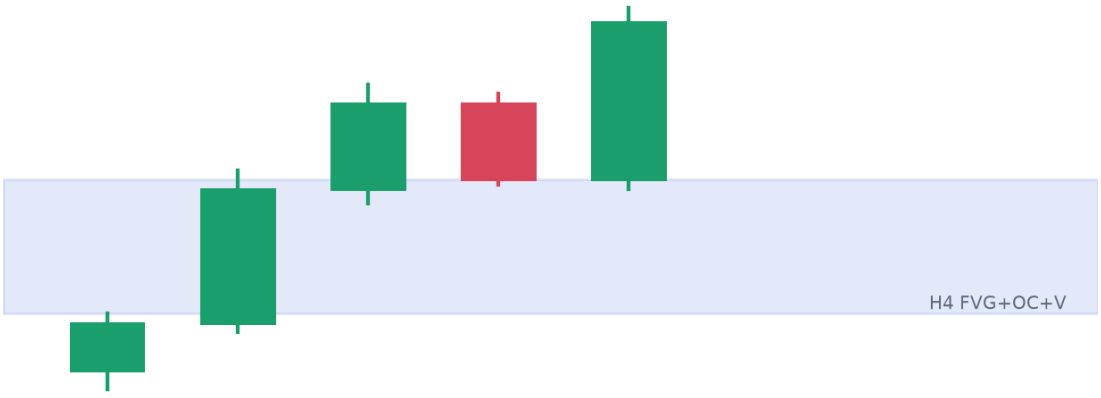

Against the Daily they start from the top of the leg; in alignment from the H4 range low; just after the Daily breakout from the pullback line. A zone is gone once an H4 candle closes through it.

Rule 17 — Merged zones

Zones that touch or sit within a few pips of each other merge into one, named after its parts, to keep the chart clean.

Buy (bullish)	Sell (bearish)
H4 FVG+OC+V	H4 FVG+OC+A

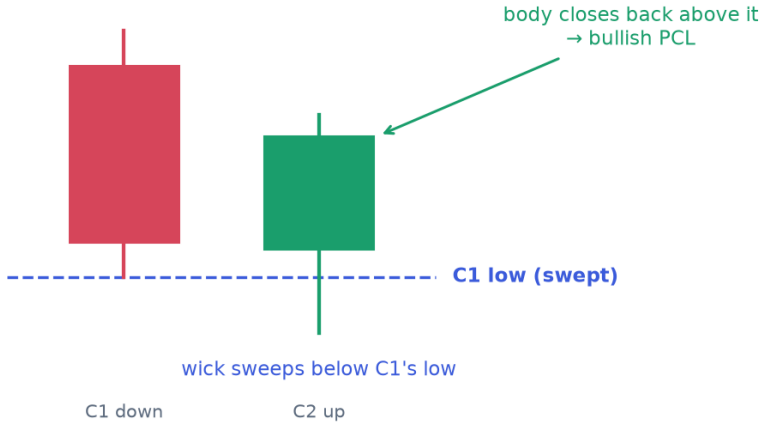

Twelve zones show by default, newest first; change it in the script settings.

E. ENTRY PATTERNS

Rule 18 — PCL — H1 (the same as the H1 Sweep)

Measured on the previous candle's **low** (high for sells). The new candle's wick sweeps past it, and its body closes back inside.

Buy (bullish)	Sell (bearish)
Down candle, then up candle: its wick goes below C1's low, and its body closes back above that low	Up candle, then down candle: its wick goes above C1's high, and its body closes back below that high

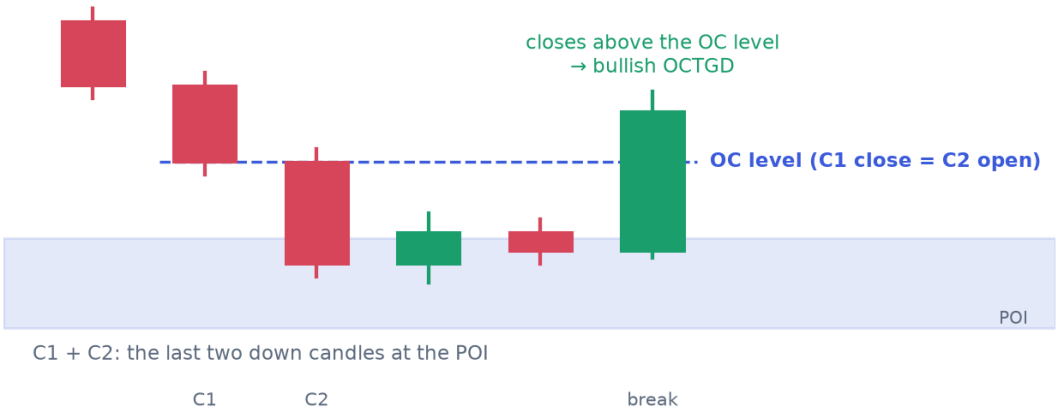

The two candles must be opposite colours. Fires on candle close.

Rule 19 — OCTGD — H1: the Open-Close that got disrespected

The **last two same-colour candles** as price touches your POI form an OC (C2 is the candle that touches it, or both form inside it). Its level is where C1 closes and C2 opens. Within a few candles, a candle closes through that level the other way.

Buy (bullish)	Sell (bearish)
Two down candles at the POI (bearish OC), then an up candle closes above the OC level	Two up candles at the POI (bullish OC), then a down candle closes below the OC level

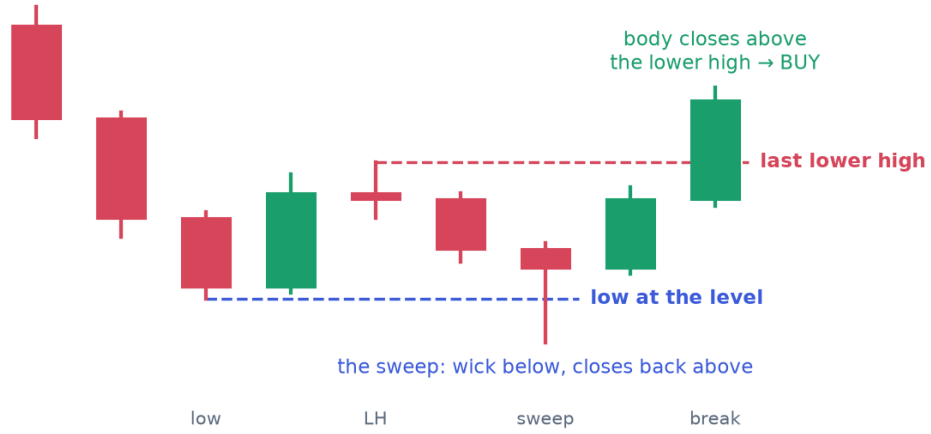

An OC that formed before price reached the POI does not count. A newer OC replaces the older one.

Rule 20 — Sweep and Break — M15 / M5

A low forms at your level (a fractal low: below the 2 candles on each side). A wick sweeps it and closes back above. Then, before a close below the sweep wick, a body closes above the last lower high.

Buy (bullish)	Sell (bearish)
Low at the level, its sweep, then a close above the last lower high	High at the level, its sweep, then a close below the last higher low

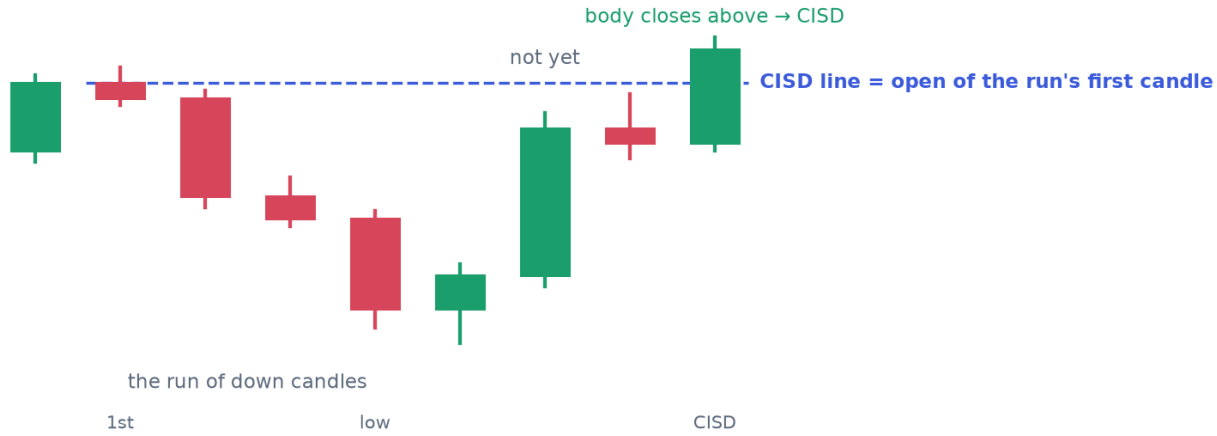

Up to 20 candles from the sweep to the break. Fires on candle close.

Rule 21 — CISD — H1 / M15 / M5: Change in State of Delivery

A run of same-colour candles delivers price to your level. The **CISD line** is the open of the first candle of the run that made the low (a smaller pullback run that doesn't go lower doesn't replace it). A body closing beyond that line is the CISD.

Buy (bullish)	Sell (bearish)
Down run to the level, then an up candle's body closes above the open of the run's first candle	Up run to the level, then a down candle's body closes below the open of the run's first candle

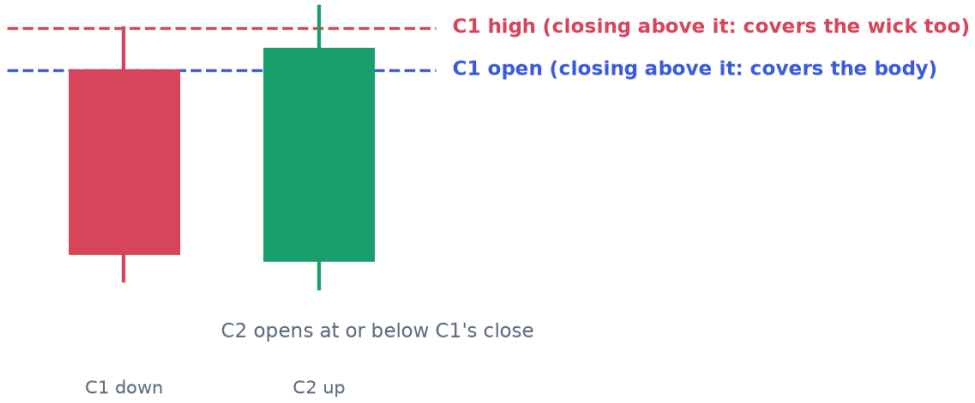

Opens and closes only, not wicks. Up to 20 candles from the low to the close through the line.

Rule 22 — Engulfing — H1 / H2

C2 opens at or below C1's close and its **body covers C1's body** (closes beyond C1's open). When it also closes beyond C1's high (low), it covers the wick too. One confirmation: whichever kind shows, and the alert says which.

Buy (bullish)	Sell (bearish)
Down candle, then up candle: closes above C1's open (body), or above C1's high (wick)	Up candle, then down candle: closes below C1's open (body), or below C1's low (wick)

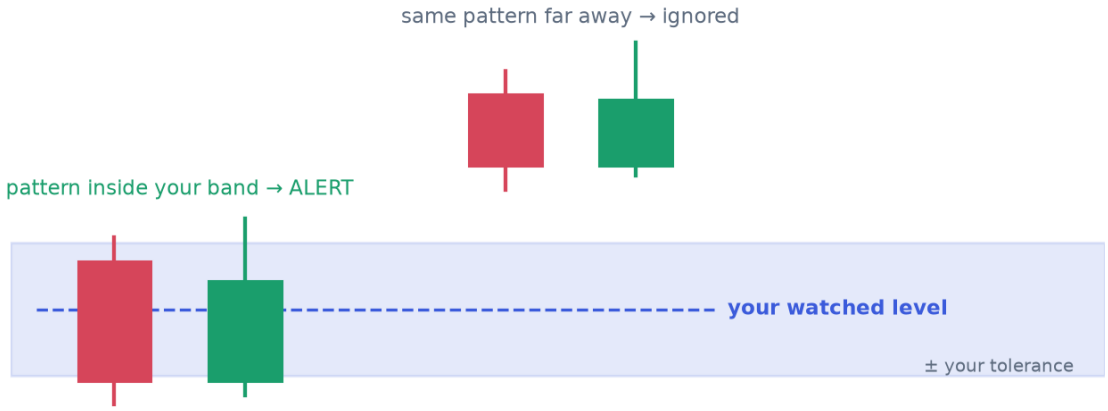

The two candles must be opposite colours. Fires on candle close.

Rule 23 — When an entry alert fires

Entry patterns only alert at a level **you chose** in Price Alerts → Entry Pattern Alerts: same direction, a confirmation you ticked for that level, and the wick that reached it within your tolerance (default 20 pips). The first one closes the alert, unless you chose to keep watching the others.

Buy (bullish)	Sell (bearish)
Set a Buy entry alert at your level	Set a Sell entry alert at your level

Entry alerts don't check the bias state — you decide when and where to watch.

F. TIMING AND DELIVERY

Rule 24 — When alerts arrive

Everything is judged at **candle close**. H4 candles on forex.com close at 2am, 6am, 10am, 2pm, 6pm and 10pm (Nigeria time). Alerts arrive on the first tick after the close, usually within seconds. Friday's last H4 alert arrives when the market reopens on Sunday.

Buy (bullish)	Sell (bearish)
Forex and metals: Sunday 10pm to Friday 10pm (Nigeria time)	Crypto: around the clock

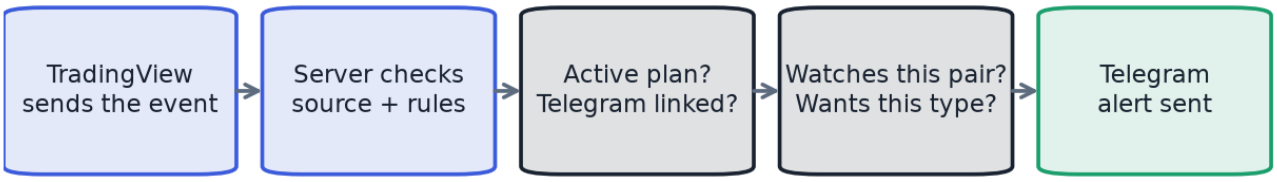

When US clocks change in November, all these times move one hour later.

Rule 25 — Who receives an alert

An alert reaches a member only if their plan is active, their Telegram is linked, they follow that pair (Settings → My Instruments), and they allow that alert type in Alert Filters. There is one switch per alert, and each message comes in the Full or Short style they chose.

Buy (bullish)	Sell (bearish)
Buy and Sell alerts follow the same rules	Every alert type is on until switched off

Members without Telegram linked still see every alert on the dashboard and in History.

Glossary

Bias	The direction (buy or sell) the Daily breakout sets.
D.Bull XH / XL, D.Bear XH / XL	Daily external high and low, with the Daily direction. f = still forming.
D.BO	Daily breakout: a Daily body close beyond the external level.
D.EQ	The 0.5 of the Daily range. Discount below, premium above.
H4.C	H4 continuation. al = in alignment, pb = in the pullback, in = against the Daily inside the H4 range.
PL, H4.PL	Pullback line. PL b = it sits on the broken high itself.
PB, D.PC	Pullback break: an H4 close beyond the line. Daily pullback confirmed.
H4 key level	The pullback line while H4 is against the Daily: the closest high (sells: low).
H4.P · BIA	H4 pullback: back in alignment with the Daily.
H4.RH, H4.RL	H4 range high and low. f = forming, ? = the range low if the pullback line breaks. For sells the letters swap.
H4.RHB, H4.RLB	H4 range high broken (the Daily continues). H4 range low broken (H4 against the Daily again).
PB.in	Pullback break inside the H4 range.
H4.P+C	One H4 candle closed through the pullback line and the H4 range edge: one alert instead of two.
FVG, OC, V, A	Reaction zones. + = merged.
!	An alert point on the chart.
Tolerance	The ± band your entry alert allows around your level. Entry alerts use 20 pips by default.

Directional bias only — not financial advice. Alerts describe market direction; entries, risk and exits are your decision.
